Course Outline

Credit Risk

Spring 2009 – B40.3305 20 TuThu 1:30-2:50PM

Contact information:

Viral Acharya
Professor of Finance
Stern-NYU and London Business School
Room: Suite 9-84
Phone: 212-998-0354
e-mail: vacharya@stern.nyu.edu

*Assistant: Norma Rodriguez
Room: Finance department, 9th Floor
(walk straight from elevators, turn right)
Phone: 212-998-0363
e-mail: nrodrigu@stern.nyu.edu

Teaching Assistant:

Room: Farhang Farazmand
NYU Stern School of Business
Department of Finance
Phone: 212-998-0718
e-mail: ffarazma@stern.nyu.edu
Aims and Objectives

Fuelled in part by burgeoning growth in the credit derivatives market in late 90’s, the market in credit expanded dramatically for 10 years till 2Q 2007. These increased activity levels led to a much greater research focus on credit and one of the features of this work has been the high degree of complementarity between the research carried out by academics and by practitioners, for example, the investment banks and rating agencies.

As you know, the credit derivatives market has been at the heart of the ongoing sub-prime crisis, having contributed substantially to it by affecting lender incentives once loans were securitized, allowing banks to “game” regulatory capital requirements, and creating opacity due to their over-the-counter (rather than centralized or exchange-based) trading infrastructure. While the market for credit derivatives suffers at the current moment, its underlying rationale in terms of risk transfer from banking sector to rest of the economy remains robust. This market will perhaps never be as large as it was in 2Q 2007, but it will certainly continue to play a major role in the financial intermediation sector going forward, once the crisis abates.

The objective of the course is to provide an introduction as well as an in-depth understanding of issues in credit risk, its modelling and analysis of credit related instruments such as default-prone debt of credit derivatives. The objective is also to provide an understanding of how and why these products played such a critical role in the ongoing crisis. As with any derivatives model, the idea is to learn it well so that one knows when not to use it! Hence, the objective is to provide a balance between developing, on one hand, a sound conceptual framework and, on the other, market understanding and insight, especially with respect to liquidity effects that are often so important in markets from a practitioner’s standpoint. We regard both as essential to the informed practitioner and academic.
Topics Covered

The topics covered in the course will include:

- Historical default experience
- Structural models of credit risk (Merton, Leland, Collin-Dufresne et. al.)
- Applications of structural models of credit risk to default prediction and hedging; the KMV model
- Historical recovery experience
- Introduction to single-name credit derivatives
- Default-intensity models (Iben-Litterman, Duffie-Singleton, etc.)
- Application of default intensity models to:
  - Credit default swaps (single-name corporate and sovereign)
  - Credit spread options
- Historical experience on correlated defaults
- Correlation modelling and applications
- Basket default products: index tranches and CDOs
- Institutional features and liquidity issues relevant to credit derivatives
- Credit Crisis 2007-08 and implications for the credit derivatives market

Format and Teaching Methods

The classes will include discussions around empirical facts about credit, guest speakers on market developments, lectures on models and their applications, and also some cases.

The class will be held on Tuesdays and Thursdays from 1:30pm to 2:50pm.
Reading Materials

There are two quite recent and very good books that deal with the analysis of credit risk. While neither of them covers all the material we plan to discuss in the class, the following one has a very good treatment of the two main modelling frameworks (the structural and intensity approaches) and we suggest that you may wish to buy it:

The other book, also excellent, is:

Additional recommended reading materials (especially for a brief summary of credit risk modelling):

Chacko, Sjoman, Motohashi and Dessain (2006): Credit Derivatives – A Primer on Credit Risk, Modeling, and Instruments. [Chacko et. Al]

Dominic O’Kane and Lutz Schogl, Modelling Credit: Theory and Practice, Lehman Brothers International (Europe), 2001. [Lehman]

The Lehman Brothers Guide to Exotic Credit Derivatives, Lehman Brothers and Risk Waters Group, 2003. [RISK]

Binder

The final paper of this outline contains a list of the items that are included in the binder. Any remaining handouts, exercises, cases etc. will be either distributed in class or put on the Blackboard (or both).

Assignments and Assessment

The grade for the course will be based on a total of six pieces of written work (three assignments and three cases due in the weeks given below, a mid-term exam (in-class in Week 8 of the course) and an in-class final exam on Tuesday, 12 May from 1:30pm to 3:30pm. The assignments, which may sometimes require extensive numerical computations, should be completed in groups of THREE. You should email Farhang (the course teaching assistant) with the composition of your group by 5pm on Tuesday 3 February.

All assignments must be handed in, in hard copy, at the beginning of the class in the week they are due (Tuesday or Thursday will be specified in class).

The weights attached to each of these components are (HW = Homework):

Week 1  
27 January  
Overview  
Structural models I  
Preparation  
1. Chacko, Sjoman, Motohashi and Dessain (2006): *Credit Derivatives – A Primer on Credit Risk, Modeling, and Instruments* (Chapter 2)  
2. RISK, Credit Derivative Products (up to Page 30).  
3. Lando, Ch. 2, Corporate liabilities as Contingent Claims (Pages 7-17 very thoroughly and then read the rest skipping the equations if you can’t follow them).

Topics  
Overview of credit market and trends: Historical default experience, corporate finance issues (liquidity, strategic, technical defaults), abstraction from corporate finance issues

Week 2  
3 February  
Structural models I, continued.  
Preparation  
1. Lando, Ch. 2, Corporate liabilities as Contingent Claims (Pages 7-17 very thoroughly and then read the rest skipping the equations if you can’t follow them).  

Topics  
Equity as call; risky debt as riskless debt minus put; Merton; discussion of limitations of Merton; Exogenous default boundaries; first hitting time values.

Week 3  
10 February  
Structural models II  
Moody’s KMV Approach  
Preparation  
1. Lando Ch. 3, “Endogenous Default Boundaries and Optimal Capital Structure”.  

Topics  
Leland type models; predictions of Leland model; Measuring asset volatilities; KMV.

Week 4  
17 February  
Case: KBC(A)  
Guest Lecture: Application of structural models in practice

Week 5  
24 February  
Introduction to reduced-form models  
Introduction to single-name credit derivatives  
Intensity modelling I: Litterman - Iben’s reduced-form model
**Preparation**

**Topics**

Historical recovery or loss-given-default experience  
Relationship between spreads and expected loss  
Litterman and Iben’s reduced-form model

---

**Week 6**  
**3 March**

**Preparation**

1. Lando, Ch. 8, “Credit Default Swaps, CDOs and Related Products” (up to Section 8.5, inclusive)

**Topics**

Pricing of single-name credit derivatives

---

**Week 7**  
**10 March**

**Preparation**

1. Lando, Ch. 8, “Credit Default Swaps, CDOs and Related Products” (up to Section 8.5, inclusive)

**Topics**

---

**Week 8**  
**24 March**

**In-class Mid-Term Exam**

**Preparation**

**Topics**

---

**Week 9**  
**31 March**

**Preparation**

DS, Ch. 10, “Correlated Defaults”.

**Topics**

Other reduced-form models; Sovereign credit derivatives

---

**Week 10**  
**7 April**

**Default Correlation I continued**

**Topics**

Case: Sovereign CDS – The case of Argentina’s Default
### Preparation
Lando, Ch. 9, pp. 213-223 and skim the rest of the chapter.

### Topics
Historical experience on correlation of defaults, Introduction to correlation products, Introduction to correlation modelling

#### Week 11

**14 April**

**Default Correlation II**

**Preparation**

1. RISK, Credit Derivative Products (up to Page 30).
2. RISK, Credit Derivatives Modelling (Pages 31-52).

**Topics**

Correlation modelling to price index products, Relationship between equity, bond and credit derivative markets, Implied correlation and liquidity effects

#### Week 12

**21 April**

**Case: Structured Credit Index Products**

**Default Correlation II continued**

**Preparation**

**Topics**

Institutional framework for credit derivatives

#### Week 13

**28 April**

**Understanding the sub-prime crisis, SIVs, toxic waste…**

**Information and liquidity issues**

**Guest lecture: The role of credit derivatives in the sub-prime crisis**

**Preparation**

**Topics**

Lessons from the sub-prime crisis

#### 12 May

**Final Exam (in-class)**

**Preparation**

All material covered in the course

**Topics**

All topics covered in the course
List of Materials Included in Binder.

1. Course Outline
2. Acharya, Viral, “Illustrations on the use of Bloomberg for applications to Options and Futures, Fixed Income and Credit Risk electives”
3. “Bloomberg tutorial for Credit Derivatives -- Credit Default Swap”.
5. The Lehman Brothers Guide to Exotic Credit Derivatives, Lehman Brothers and Risk Waters Group, 2003. [RISK]
6. Chacko, Sjoman, Motohashi and Dessain (2006), Credit Derivatives – A Primer on Credit Risk, Modelling, and Instruments (Chapter 2).
23. Peter Madigan and Nick Sawyer, “All Fall Down”, Credit, October 2008 Supplement.
