INNOVATION & DESIGN SYLLABUS

Professor: Luke Williams  
Email: luke.williams@stern.nyu.edu  
Spring 2014: TUESDAY’S 6-9 pm  
Office Hours: KMC 7–95, by appointment

Teaching Fellow: Turchese d’Andrea  
Email: tda229@stern.nyu.edu

COURSE DESCRIPTION

Innovation and design are the key drivers of success for many of today’s leading startups and Fortune 500 companies. Some of the most dramatic gains in shareholder value over the last few years (e.g., Google, Apple) are due to a culture of disruptive innovation. Indeed, a culture of innovation is commonly recognized as the only sustainable competitive advantage.

This course will focus on developing innovative ways of thinking, which are different from those typically learned in MBA programs. It represents a process broken into a set of tools. Pick and choose which techniques work best for your context and your selected focus area. Use the tools alone or combine them with methods learned in other classes to imagine and implement new solutions.

The course provides many opportunities to apply these new ways of thinking through class exercises and a course project, where you will develop innovative concepts for a chosen topic. Teams will submit their work at the end of three separate project phases.

Course Material on Stern Web Site

A course web site is available on NYU Classes, http://sternclasses.nyu.edu. This site contains the course syllabus. Powerpoint presentations and other handouts will be posted after each class.

Course Objectives

The premises of this course are that (i) all people are naturally creative and (ii) everyone’s creative abilities can be improved (just like all of your other abilities) through learning and practicing certain skills and techniques. The course is intended for students who want to enhance their innovation and disruptive
thinking skills in business and other domains. More specifically, the course is designed to help students:

1. Stimulate innovation in yourself and others.
2. Incorporate design thinking into your analysis of business situations.
3. Apply innovation methodology to a real-world business situation.
4. Learn how to build and lead a disruptive innovation team.

**Suggested Reading**

**Further Reading**

A reference list of many other books on creativity, innovation, and design is toward the back of the syllabus.

**Course Grade**

Your course grade is based on the following components:

- Group Project: Discover Phase Presentation and Document 30%
- Group Project: Deliver Phase Presentation and Document 40%
- Class Participation 30%

*Grades for your project and presentation will incorporate peer evaluations.*

**Course Content**

The course uses a combination of:

1. Lectures and Readings
2. Group Project
3. Class Participation and In-Class Exercises

**1. Lectures and Readings**
Lectures and readings introduce new tools, frameworks, and concepts. Lectures will be interactive, so be prepared to ask and answer questions. Some lectures may include outside speakers.

2. Group Project
The group project will focus on a process used to describe a way of thinking and a set of key outputs and deliverables associated with creative concept exploration and development. To do this, students will talk to real users; observe people in their native environments; think about real physical, technical, and social constraints; and understand real market pressures. This process will yield innovative concepts that have the potential to create traction in the marketplace, and forge emotional connections with users. The group project will be used as the basis for the collaborative working sessions.

Group Project Goal
The goal of the project is to discover insights, design concepts, and visually communicate an experience using creative methods and research heuristics. The project task is to create a market- and technology-appropriate consumer offering that has the potential to disrupt its category.

Group Project Teams
Students will work in teams of five. The greatest cause of disappointing team assignments is the inability to coordinate work effectively. Some ways to prevent this occurrence are:

1. Choose team members who can meet at times that are convenient for other team members.
2. Take notes of your meetings so your decisions and assignments are clear.
3. Plan sufficient time to discuss your analyses, make decisions, and prepare the final presentation and report.

We can help resolve team conflicts, but the final responsibility is yours. Teams may issue a written warning to any student who is not contributing fairly or constructively. This warning should state the problems and list specific steps to resolve these problems. All other members of the group should sign the warning and you should give a copy to us. At the end of each project stage, you will evaluate the relative contribution of your team members.

4. Class Participation and In-Class Exercises
The best learning experiences occur when students participate actively. We will have several in-class workshops throughout the semester. These will require you to think creatively. Please set aside your inhibitions and enjoy yourself. These exercises give you the opportunity to stretch your creative cognition skills.
These are elements we will consider in evaluating your class participation:
1. Are you a good listener?
2. Are you willing to test new ideas and new ways of thinking?
3. Do you promote an environment where everyone feels free to express their ideas and stretch their thinking?
4. Do you contribute to the learning environment by sharing your thoughts and experiences?
5. Do you ask constructive questions of other students that help to deepen everyone's understanding?
6. Are you willing to share ideas and information in a collegial fashion?
7. Are you willing to interact with your classmates to help refine ideas?
8. Do your comments build on earlier comments to advance the discussion?
9. Do your comments incorporate concepts presented in lectures, readings, and earlier classes?
10. Do you make your points succinctly?

5. Design Notebook
Each student is encouraged to maintain a notebook throughout the semester to record your insights from the course, your observations and insights on the course project, and any other creative insights you have throughout the semester on any topic. The notebook will be a personal record of your creative activity throughout the semester. You should approach this mental exercise with the same energy you would devote to physical exercise when training for a sporting event. When writing about course material, please record the key points plus your thoughts about all of our in-class exercises and ideas you have that relate to the course project. Beyond course material, please record anything you find creative, spontaneous, exciting, challenging, troubling, etc. You can capture your insights and ideas in writing, pictures, drawings, or any other visual representation that you can think of. The notebook is for your personal use. It will not be evaluated as part of your course grade.

ADMINISTRATION

1. Students are expected to attend every class from 6-9 pm. If you cannot attend a class, please send a report of your class preparation prior to the class you're missing in order to receive partial credit for class participation.

2. Please complete all readings before class and hand in all assignments at the beginning of class. Late assignments will be downgraded.

3. Please minimize disturbances during class, i.e., talking, arriving late, leaving the room, etc.

4. Laptops may not be used during lectures and discussions but are fine to use during the break-out sessions when you're working on the course project.
5. Students are expected to adhere to the school’s honor code. Please ask us if you have any questions about how the honor code applies to a specific situation.

6. No extra credit assignments will be given.

7. Deviations from the syllabus may be necessary.

**COURSE SCHEDULE**

<td><strong>Reading:</strong> Disrupt, Introduction &amp; Chapter 1</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Just Add Sugar, <em>New Yorker</em></td>
<td></td>
</tr>
</tbody>
</table>
**DISCOVER PHASE**

The next step is to take the hypotheses you just crafted and hone them into something usable. You'll start by looking at the real-world context your hypothesis will exist in. Who lives there now? What do they need? What motivates them? Defining a disruptive opportunity is designed to be quick and informal, intuitive and qualitative, and above all, accessible. It shouldn't take you more than two to three days, and, in many cases, you'll be able to do it in as little as two or three hours (i.e., one class).

<table>
<thead>
<tr>
<th>February 18</th>
<th><strong>Lecture:</strong> Design Research Methods</th>
<th><strong>Group Project Work:</strong> Prepare 4-5 page research plan.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Workshop:</strong></td>
<td>1. Determine the kinds of information you’d like to gather by making a list of questions based on your hypotheses.</td>
<td><strong>Reading:</strong> Disrupt, Chapter 2 Tension Point Articles</td>
</tr>
<tr>
<td></td>
<td>2. Define the relevant audience: a mix of the target customer population, potential customers, and/or outlier customers.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>3. Work out the timing required. Your decision will depend on the size and complexity of your focus, but it should be a rapid immersion—2–3 hours for a quick informal study, 2–3 days for a longer one.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>4. Set up interviews and observations in the environment where people use the products and services relevant to your situation.</td>
<td></td>
</tr>
</tbody>

<td>Each team to present results from the Discovery Phase (i.e., three opportunity areas).</td>
</tr>
</tbody>
</table>
| **Reading:** | This Is Generation Flux, Fast Company  
How Apple Got Everything Right By Doing Everything Wrong, Wired Magazine |

| March 18 | Spring Break: No Class |
**DESIGN PHASE**

Opportunities by themselves don’t lead to profits or lasting change. So, the big question in this phase is: How do you transform an opportunity into an idea? Well, the first thing to realize is that any old ideas won’t do. We’re looking for disruptive ideas—ideas that have the power to influence and to shape behavior. Ideas that stir the imagination and inspire a sense of possibility. We’ll spend part of this phase learning how to move past the typical stumbling blocks and generate the kind of ideas that transform a compelling opportunity into a commercial offering.

| March 25 | **Lecture:** Design Phase Introduction  
Idea Generation Techniques  
**Workshop:**  
1. Break down your opportunity into a number of focus points for generating ideas.  
2. Think creatively about the answers to each question, and generate as many new ideas as you can.  
3. For inspiration, use the random object provided to figure out how you could connect the entire stimulus or part of the stimulus to your situation.  
**Group Project Work:** Generate multiple ideas for each opportunity area.  
**Reading:** Disrupt, Chapter 3 |
| April 1 | **Lecture:** Prototyping and Visualization Methods  
**Workshop:**  
1. Create physical mock-ups (low fidelity) of your ideas.  
2. As you and your review team are working with and evaluating the prototypes, collect as much feedback as you can.  
3. At the end of each cycle, review the prototype with other people and “iterate” it in the next cycle based on feedback.  
4. Each cycle of iteration narrows the range of possibilities until the idea is refined.  
**Group Project Work:** Refine and articulate 3 concepts. Prepare for concept testing.  
**Reading:** Disrupt, Chapter 4 |

</tr>
</tbody>
</table>
**DELIVER PHASE**

Disruptive ideas are great, but they’re only half the story. Unless you can make those ideas feasible, they can’t deliver value. In this phase, we change our focus from conceiving ideas to transforming them into practical solutions. Remember: There’s a simple but critical difference between an idea and a solution: A solution is always feasible. If it’s not, it’s not really a solution. The final output of this process is a 9-minute pitch that takes your audience from their initial, pre-presentation, “Why should I care about this?” through the mid-presentation, “I’m curious to see where this is going,” attitude, to a post-presentation, “Hey, this is great! How do we implement it?”

**April 22**

**Lecture:**
Revenue Models  
Implementation Planning  
Discussion of VOSS article

**Workshop:**
1. Refine the value proposition for the end customer.  
2. Determine key revenue sources and much customers will pay.  
3. Work out how the solution delivers value to each stakeholder involved.

**Group Project Work:**
Develop a revenue model, implementation timeline, and “explainer” video for chosen solution.

**Reading:**
TBD

**April 29**

**Lecture:**
Creating a Solutions Pipeline  
Pitching Your Solution

**Workshop:**
4. Establish the inadequacy of current clichés (The Status Quo).  
5. Explain why this is an issue (The Observations).  
6. Explain how that’s frustrating the target customer (The Story).  
7. Tell them something they don’t know (The Insight).  
8. Provide a sense of how this knowledge could be used (The Opportunity).  
9. Use a familiar example to help them understand the potential (The Analogy).  
10. Reveal your answer to the opportunity (The Solution).  
11. Explain the motivation for customers and stakeholders to make the change you’re suggesting (The
