Course Number:  
B55.3337.30  

Date/Time: Wednesdays 6:00 – 9:00 pm  

Office Hours:  
To be determined  

Required Course Materials  

**Recommended Reading**

Agriculture and Health Care Starter Packets in Appendix A & B, depending on the domain you choose.

**Course Description:**

This course is designed to put the idea of teaching social entrepreneurship to its ultimate test—with the objective of launching and incubating a series of social ventures through the course of one to two semesters. Up to five teams of three to four students each will be formed during the first class. Each team will consist of students of multi-disciplinary backgrounds as the class will be open to students from a variety of schools (e.g. School of Medicine, Tisch School of Arts, School of Law, School of Business, etc.) This way, the start-up teams will be able to work through problems from a creative, technical as well as business point of view more effectively than if they were all from the same background.

Unless a team has an idea of its own, it will be given one of two “mega-problems:”

1. The decline of agricultural yields due to drought, groundwater depletion, over-use of chemical fertilizers and pesticides, poor farming practices, etc.
2. Dangerously low per-capita doctor concentration, making basic health care difficult to obtain.

The market of focus will be India, and the class will start with a trip to India in January 2011. By using the mega-problem as a starting point, teams will drill down through the problem to develop a social venture that addresses the problem. For example, the first problem could result in solutions as diverse as low cost water harvesting systems to a new kind of agriculture-focused micro-financing institution to a research institution for organic farming. The teams will be provided with a variety of tools including in-class workshops, labs and access to a multitude of partner companies in India. By the end of the class, the teams should have fine-tuned their solutions, developed a prototype of their product or service, and completed strategy statements and business models for their venture.

The class will be 3 credits and will focus on (1) studying the industry, (2) mapping opportunities, (3) fine-tuning ideas, (4) designing a strategy and mission statement, (5) developing a pilot product/solution and (6) developing the business model. Depending on the success of the first semester, a second semester may be offered as a co-curricular class, and will focus on (1) testing and finalizing the pilot product/solution with beta customer(s), (2) developing the business plan and financial plan and (3) preparing for and pitching to venture capitalists.
**Course Philosophy**

At business schools these days, it is a matter of constant debate as to whether a classroom environment can foster entrepreneurship. After all, successful entrepreneurs display characteristics which often seem to have little to do with what can be taught – passion, risk-taking appetite, a sense of purpose, a vision, a dream and so on. For social entrepreneurship, which involves developing a sustainable enterprise that also addresses a social issue, this is perhaps even more pronounced.

In addition to the requisite individual characteristics, there are arguably several key inputs that are important for incubating a business. They include (1) an idea, (2) expertise, (3) a market and (4) capital. By providing a mega-problem as a starting point for ideation, forming multi-disciplinary teams, focusing on India, and potentially providing access to seed funding (if a second semester is offered), this social venture incubation class proposes to uniquely bring all of these to the classroom.

**Course Objectives**

- To provide students already predisposed toward social entrepreneurship with the concepts, frameworks and models to systematically incubate new social businesses.

- To provide access to industry-specific resources including publications, industry experts and on-ground partners in order to map opportunities, fine-tune start-up ideas and develop working products or solutions.

**Course Deliverables**

*Industry Structure Analysis and Opportunity Mapping*

During the India trip, each team will have the opportunity to meet a variety of best-in-class public and private institutions in their domain. These visits, in combination with the required reading and other secondary research, will allow the teams to conduct a detailed Industry Structure Analysis on their respective sectors. This should include market segmentation analysis, market sizing, growth rates, industry economics, trend analysis, competitive landscape, regulatory framework analysis, and consumer research. The Opportunity Mapping Model will then be used to map specific opportunities derived from the Industry Structure Analysis with the core strengths of the team/venture in order to fine-tune the product or service offering.

*Strategy and Mission Statement Development*

Once the product/service offering has been identified, each team will need to develop its strategy/mission statement. This should be broken into 5 parts: (1) the Purpose of the Venture, (2) the Scope (what is the “playing field” for the venture), (3) Promise (what is
the promise to its customer), (4) Advantage (What is the venture’s competitive advantage), and (5) Environment (What is the internal human or cultural environment that the venture seeks to create?).

*Product/Service Development*

The next step will be for the teams to build or develop their product/service offering. For this, the class will have a set of industry/domain experts who will formally advise the teams. Laboratory time or field experiments may be required. The teams will be evaluated based on the effectiveness and quality of their prototypes or service offerings.

*Initial Business Concept Presentations*

At the end of the class, each team will need to present their Initial Business Concept Presentations. They will need to provide a detailed overview of the sector, the opportunity, the mission statement, a demo or video of the product/service, the business model, and initial thinking on how the venture will scale.

**A note on teams:** Peer evaluations will assist me in assessing the contribution each team member makes to the business plan. Individual grades therefore may be significantly better (or worse) than the team grade. Only in circumstances where a team member has not contributed, and where the balance of the team has attempted, unsuccessfully, to correct the problem with the individual and myself, can a team member be "fired." Arrange a meeting with me at the first sign of trouble.

*Class and Small Group Participation*

The success of this course depends not only on your attendance, but also on your participation. The more you participate, the more fun and valuable the course will be for all of us. For every class, students are expected to read the supplemental readings and cases. Participation is measured using several criteria. These include actively participating individually during the "discussion" part of our sessions, in small group meetings, and in group presentations.

The instructor's evaluation of your participation will be evaluated using these criteria:

- When questions were presented to the class, how active was your participation?
- When you answered questions or commented on reading-related or discussion-related material in class, how accurately did you use concepts previously discussed?
- When you asked questions or commented on reading-related or discussion-related material in class, how creative (as opposed to redundant or repetitive) was your thinking?
- As this class involves significant time on the ground in India, how active were you in setting up meetings, in participating and extracting data in those meetings?
While in India, how enterprising were you in accessing new resources while on the ground and maneuvering unforeseen circumstances?

**Attendance and Lateness Policy**

Attendance at each class session is expected. If you miss more than one class (regardless of the reason), you can expect this to have a negative effect on your class participation grade. Excessive lateness, or leaving early, will also have a negative effect on your contribution grade.

**Laptops, Cell Phones, & Other Electronic Devices**

These may not be used in class. Please turn off all electronic devices before class begins.

**Honor Code and Academic Integrity**

We take Stern’s honor code very seriously and therefore expect that you will too. In order to maintain a vigorous learning community in the classroom, it is critical that we, as a class, do not tolerate academic fraud (cheating, plagiarism, lying). As a matter of personal and professional respect for each other, and ourselves we should expect the highest standards of conduct from our peers and ourselves. Violating these standards takes away the value and meaning of the educational environment for all of us, and in the event that such a violation occurs, the individual(s) responsible will be subject to University sanctions that may include failure from the course, suspension, or expulsion. Please see me if you are uncertain about what represents an honor code violation.
**About the Instructor**

Hans Taparia is a co-founder and President of Preferred Brands International (PBI). PBI, set up in 1995, is a Stamford, Connecticut based food company, with a subsidiary in India called Tasty Bite Ltd., that manufactures a range of natural, convenience, specialty foods under the brand *Tasty Bite*. *Tasty Bite* is currently the largest selling brand of Indian food and amongst the top 3 selling brands of Asian food sold in North America, available at most mainstream chains including Costco, Whole Foods, Safeway, Trader Joe’s and Kroger. Its products include a range of over 40 Indian and Thai entrées, meals, sauces and rice products.

Tasty Bite (India) Ltd., PBI’s manufacturing arm in India, is an integrated food factory with a ready-to-serve food processing division, frozen processing section, cold storage facility and 23 acres of farm. Tasty Bite has been highly active in corporate social responsibility over the past 15 years and has live projects in agriculture, renewable energy, water conservation, education and disaster relief. The company was awarded the 2008 Indian Government’s APEDA award for food exports and ranked as one of the 2009 Great Places to Work Institute’s Top 50 Indian companies to work for.

Hans is also a co-founder of ASG-Omni, a US and India based management consulting firm and incubator. ASG-Omni, along with Desh Deshpande and Sycamore Networks, was a co-founder of Bangalore-based Tejas Networks, which has grown to become one of the top 10 optical networking companies in the world. Tejas today employs over 700 people and has also been a winner of numerous accolades including the *Red Herring* 100 Global Award Winner in 2007 and the Deloitte and Touche Fast 500 Asia award 4 years in a row. Hans has a Bachelors of Science degree from the Massachusetts Institute of Technology.
## Course Schedule

### Spring 2011 Semester - 3 credits

<table>
<thead>
<tr>
<th>Date</th>
<th>Module</th>
<th>Class Agenda; Readings</th>
</tr>
</thead>
</table>
| December 10th, 2010 | Pre-semester Team Formation Session          | - India Logistics  
- Syllabus Review  
- Team formation                                                                 |
| India Trip 1      | 3 week trip before classes begin with on-site visits to explore mega-problem. (see list of representative institutions in Table 1 & 2) | Reading:  
- Agriculture Starter Packet A;  
- Health Care Starter Packet B                                                                 |
| February 9, 2011  | Idea Generation                               | Break-out Brainstorming Sessions                                                     |
| March 2, 2011     | Opportunity Mapping Model                    | Reading:  
- *The Blue Ocean Strategy*  
- *The Blue Sweater*                                                                 |
| March 9, 2011     | Strategy and Mission Statement Development    | Reading:  
- *Strategy: A Primer*
