**Directions: VAW Printing of Data Dictionary for Phase 2**

VAW, by default, will print the entire data dictionary for your project, whether blank or filled-in. This will lead to unnecessarily long output, and will make it difficult to identify what you intend for me to review.

To print the relevant items only, follow this procedure:

Select: Repository ➔ “Reports”

Project Scope: “Data Flow”

Report Type: “Single Entry Listing” (changed from default)

A “search” window will come up. Search to select each item for printing. This will have to be performed one-at-a-time.

Reminder: Data dictionary should be developed using the VAW case software.
