MODELING, STORY TELLING AND
INVESTING**

Aswath Damodaran

The Bermuda Triangle of Valuation

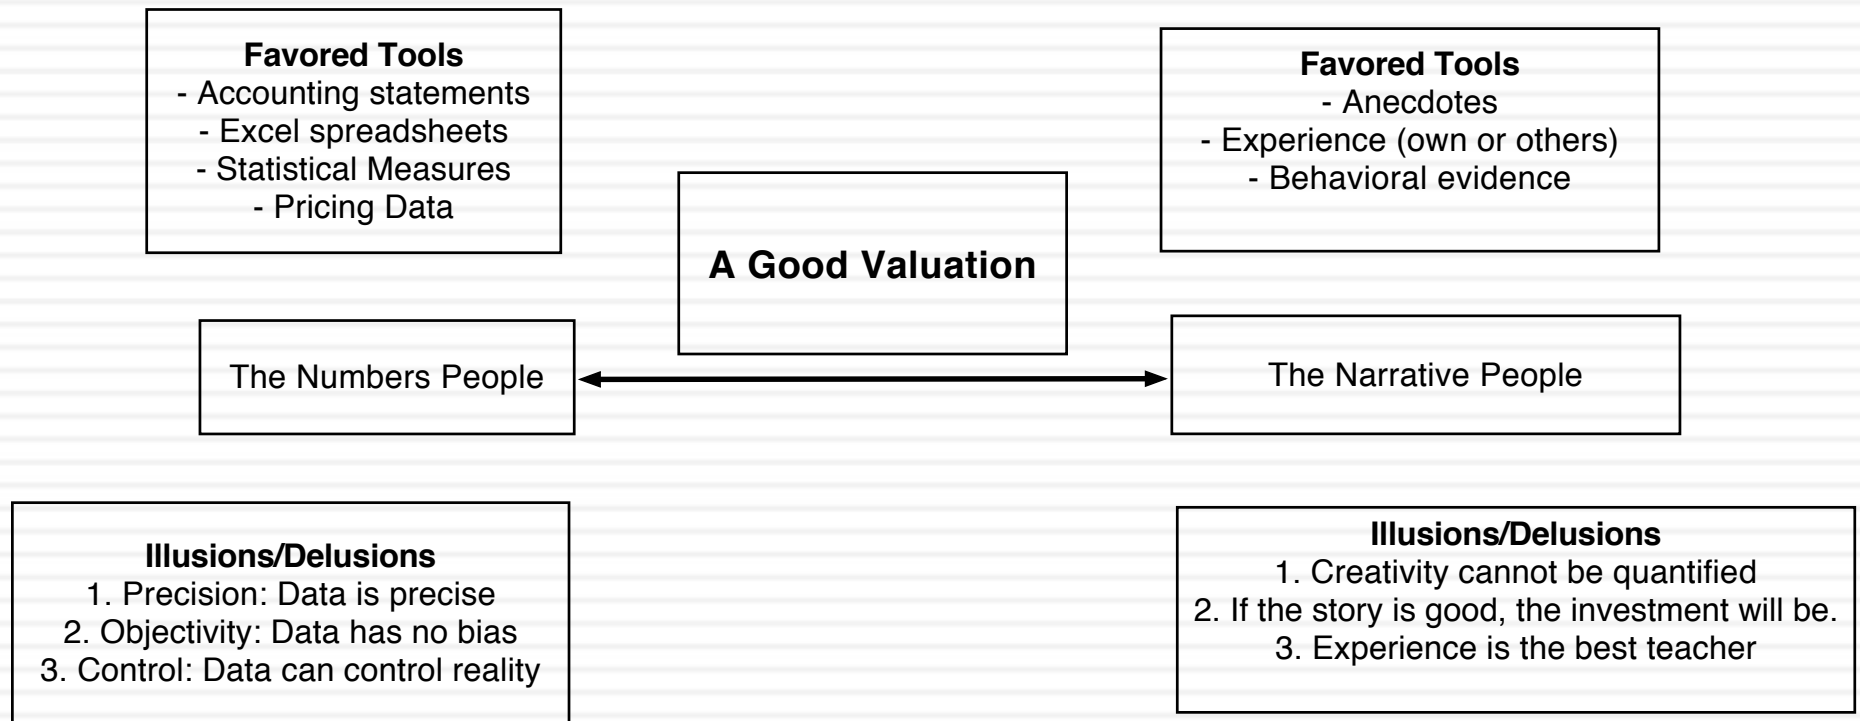

Value: The Drivers

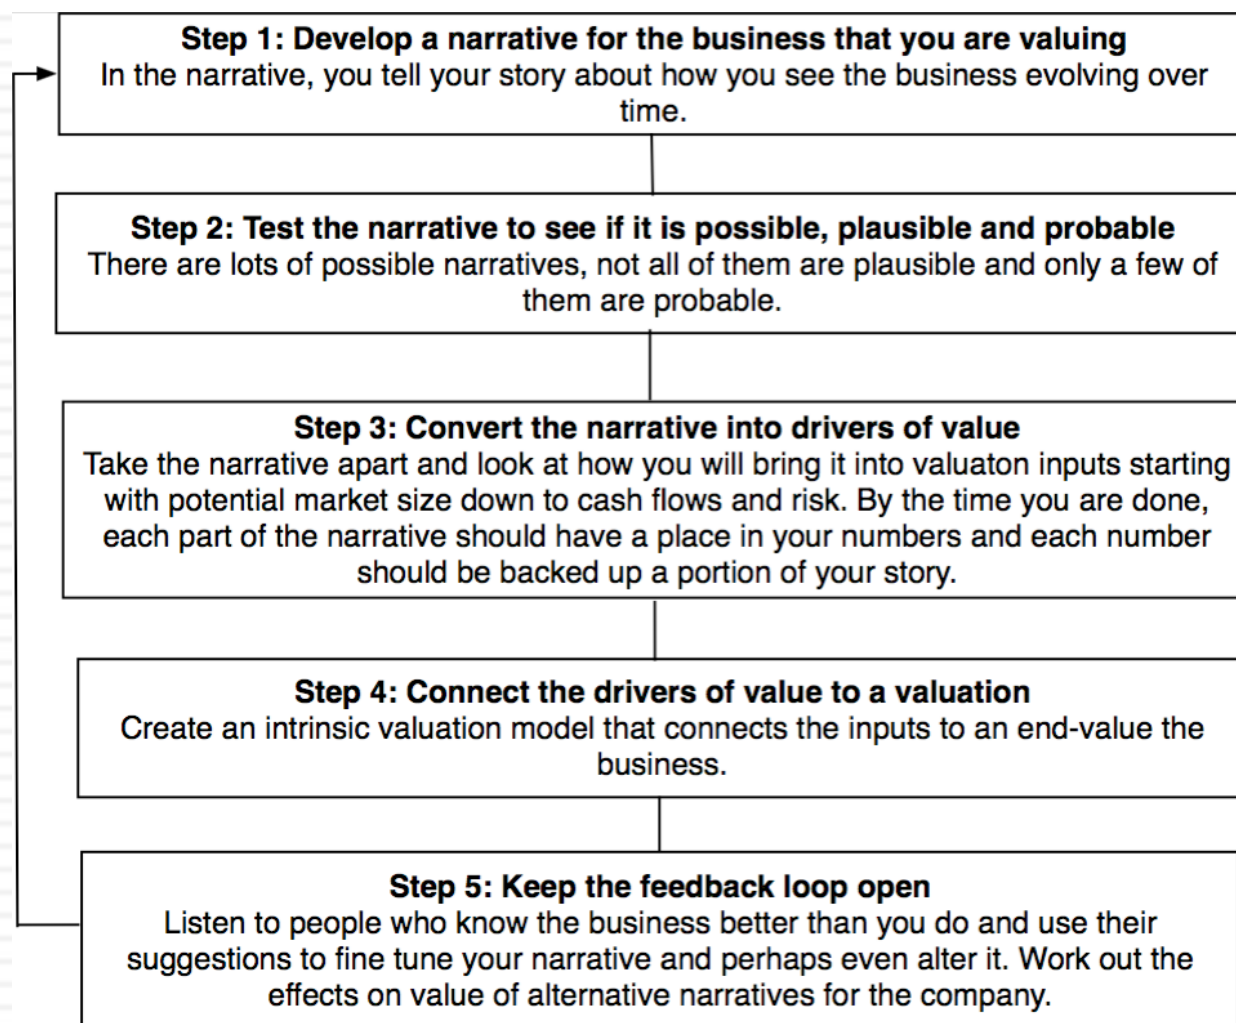

What are you?

- If you were asked to categorize yourself, would you more naturally think of yourself as a
 - a) Numbers Person
 - b) Story Person
 - c) Not sure
- When did you make this decision and how has it affected your educational and career choices?
- At your current job or position, do you find yourself hanging out with people who are like you (in inclination and training)?

Bridging the Gap

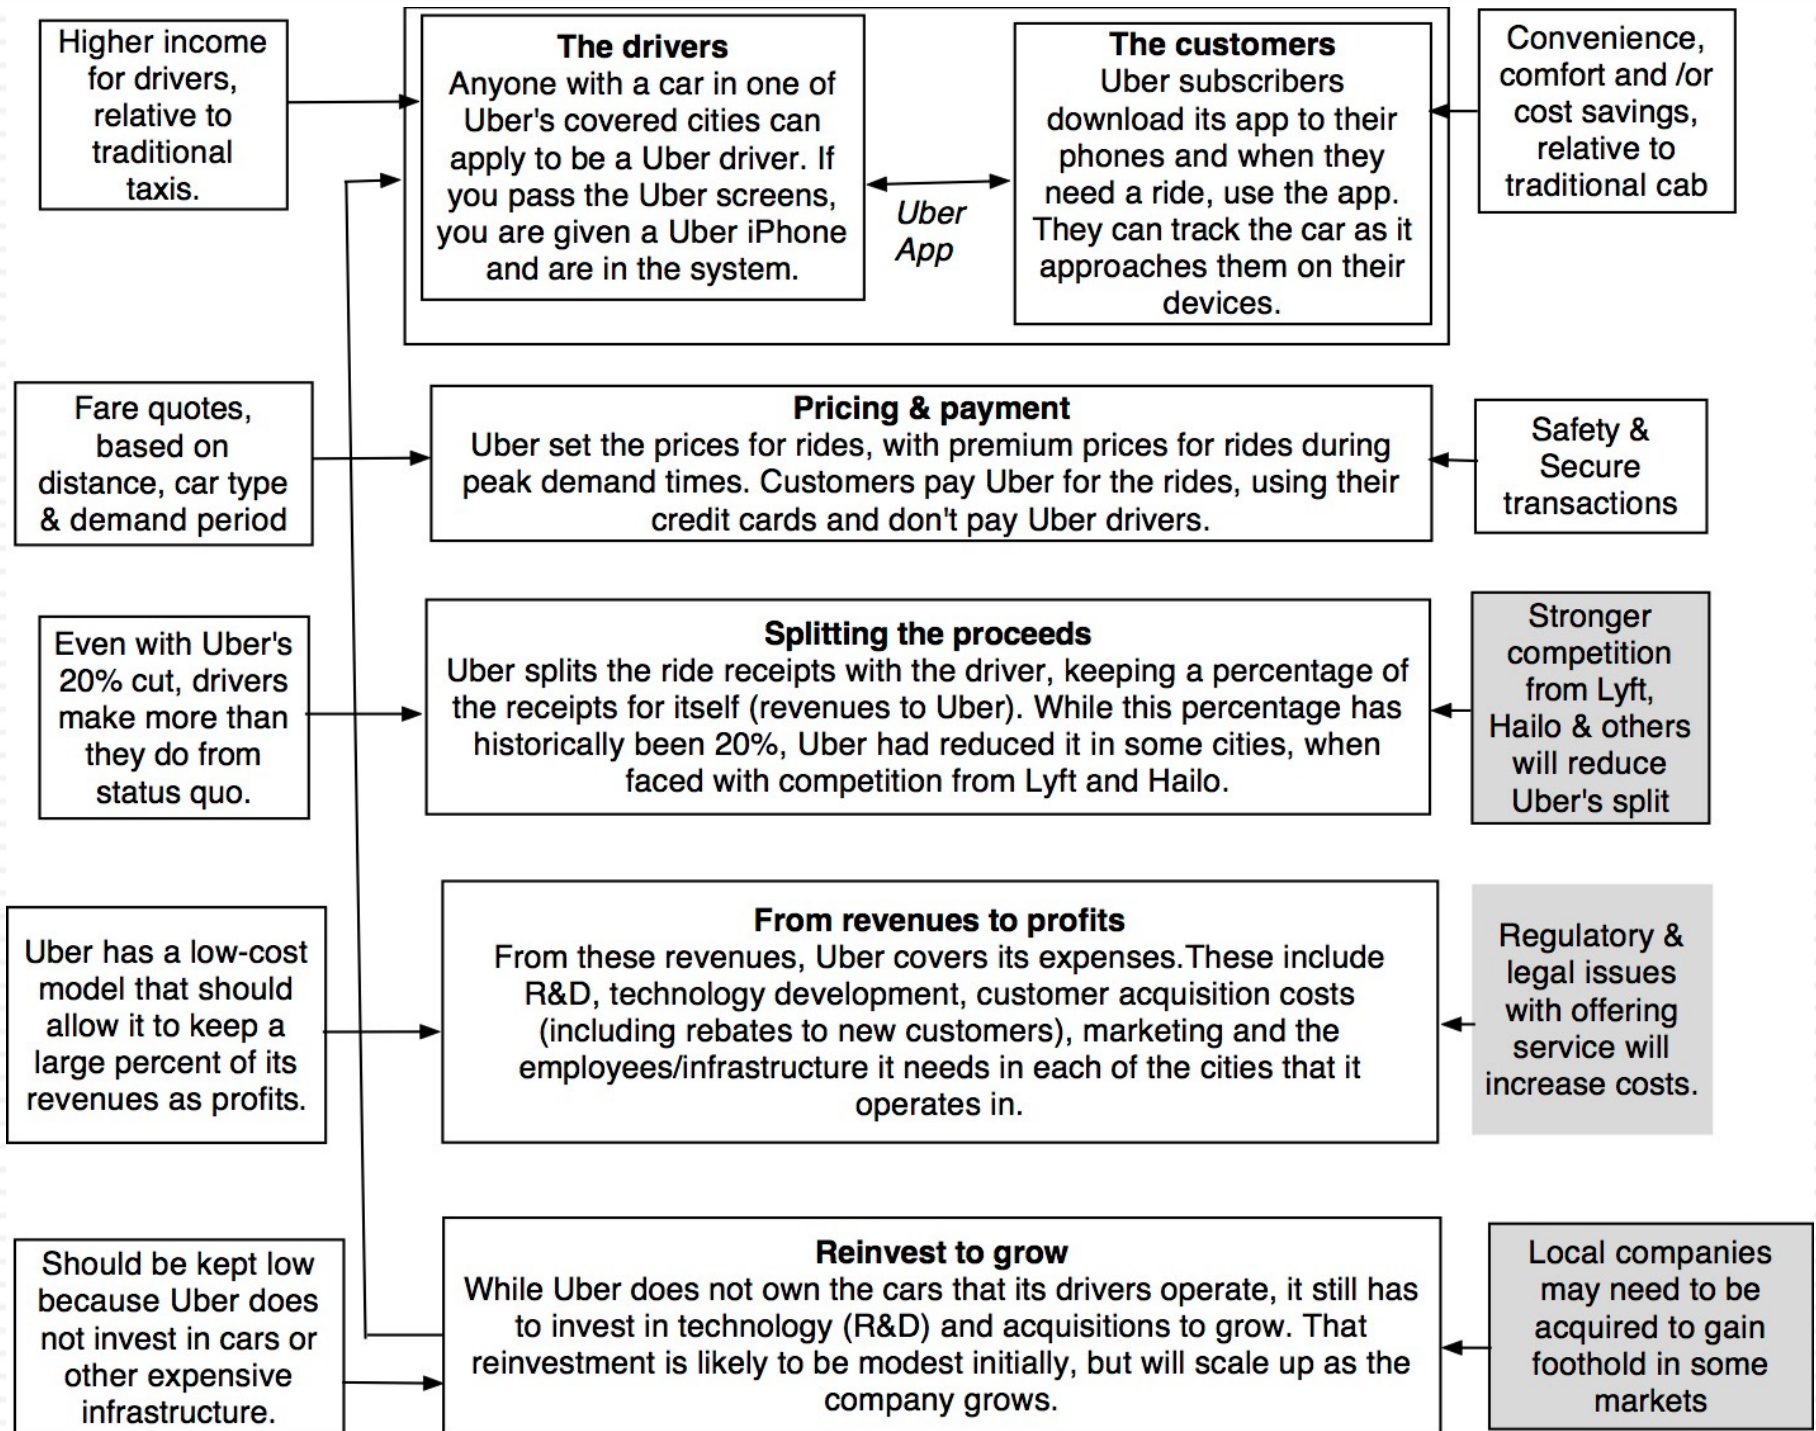

The Steps

Step 1a: Survey the landscape

- Every valuation starts with a narrative, a story that you see unfolding for your company in the future.
- In developing this narrative, you will be making assessments of
 - ▣ Your company (its products, its management and its history).
 - ▣ The market or markets that you see it growing in.
 - ▣ The competition it faces and will face.
 - ▣ The macro environment in which it operates.

Understanding Uber in 2014

2014	6.47%	7.53%	-1.06%

Only once in the last 10 years have auto companies collectively earned more than their cost of capital

But it is not just another auto company..

Ferrari sold only 7,255 cars in all of 2014

Ferrari had a profit margin of 18.2%, in the 95th percentile, partly because of its high prices and partly because it spends little on advertising.

Ferrari: Geographical Sales (2014)

Ferrari sales (in units) have grown very little in the last decade & have been stable

Ferrari has not invested in new plants.

SK Innovation: The Business Mix

SK Innovation: The Back Story

SK Innovation: A Pictorial History

Step 1b: Create a narrative for the future

- Every valuation starts with a narrative, a story that you see unfolding for your company in the future.
- In developing this narrative, you will be making assessments of your company (its products, its management), the market or markets that you see it growing in, the competition it faces and will face and the macro environment in which it operates.
 - ▣ Rule 1: Keep it simple.
 - ▣ Rule 2: Keep it focused.

The Uber Narrative: An Urban, Car Service disruptor

In June 2014, my initial narrative for Uber was that it would be

1. An urban car service business: I saw Uber primarily as a force in urban areas and only in the car service business.
2. Which would expand the business moderately (about 40% over ten years) by bringing in new users.
3. With local networking benefits: If Uber becomes large enough in any city, it will quickly become larger, but that will be of little help when it enters a new city.
4. Maintain its revenue sharing (20%) system due to strong competitive advantages (from being a first mover).
5. And its existing low-capital business model, with drivers as contractors and very little investment in infrastructure.

The Ferrari Narrative: An Exclusive Club

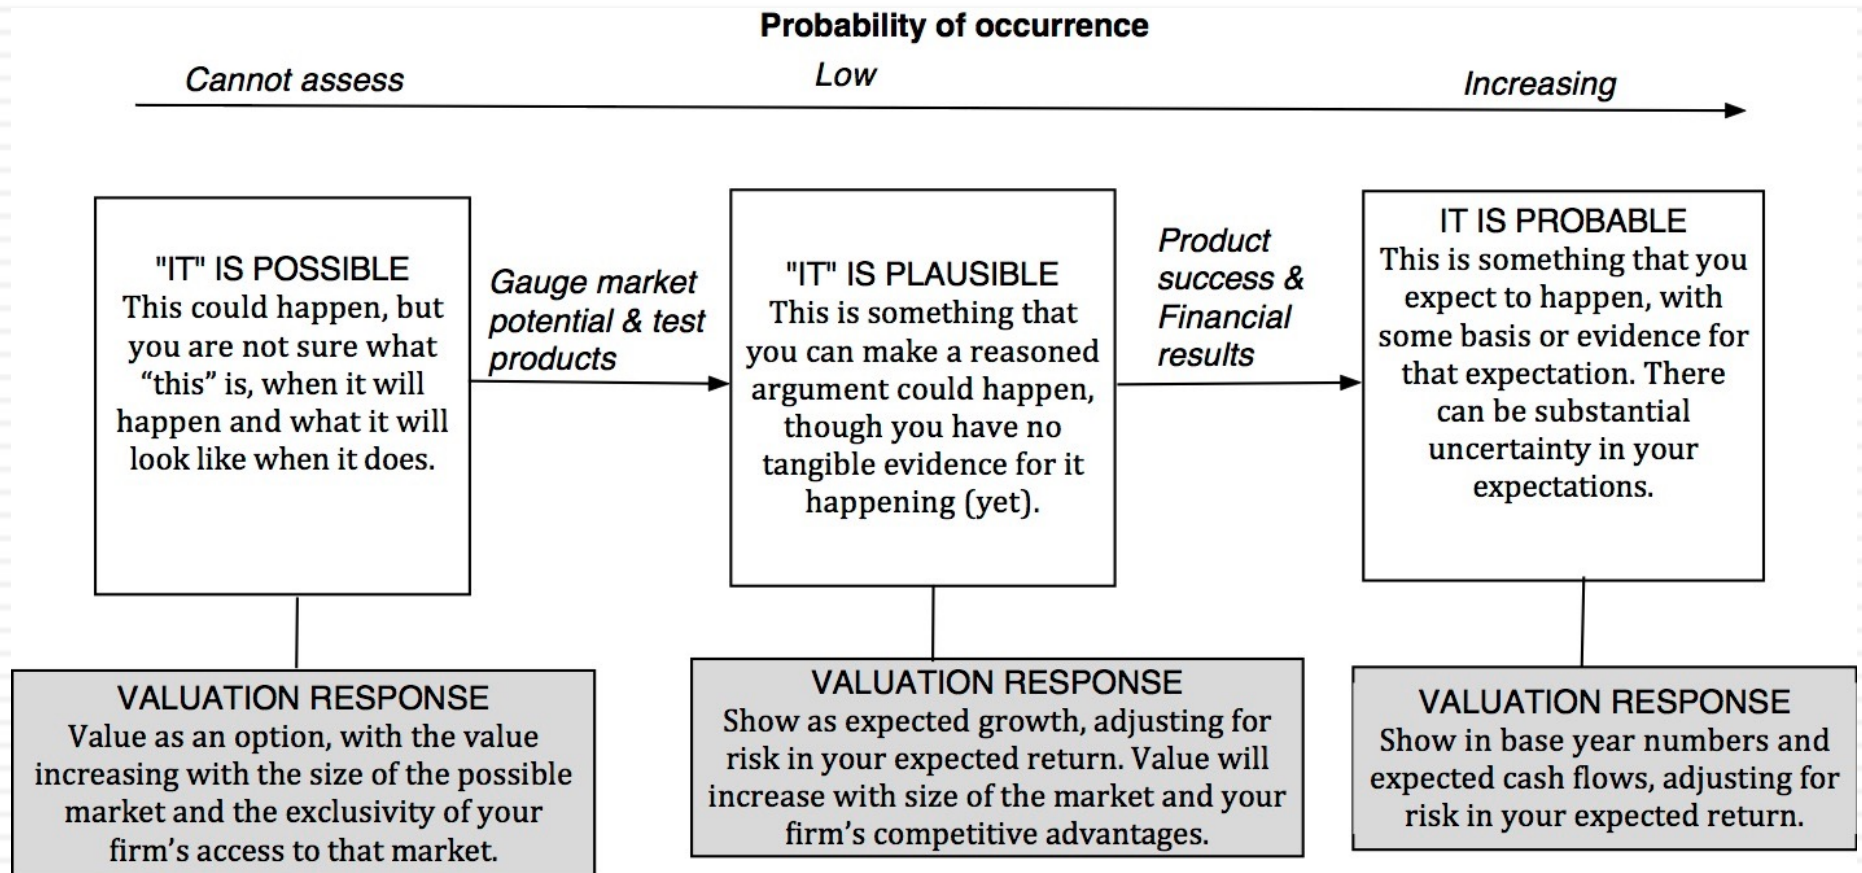

- Ferrari will stay an exclusive auto club, deriving its allure from its scarcity and the fact that only a few own Ferraris.
- By staying exclusive, the company gets three benefits:
 - ▣ It can continue to charge nose bleed prices for its cars and sell them with little or no advertising.
 - ▣ It does not need to invest in new assembly plants, since it does not plan to ramp up production.
 - ▣ It sells only to the super rich, who are unaffected by overall economic conditions or market crises.

SK Innovation: An Oil Play

- While SK Innovation is in multiple businesses, oil remains and will continue to remain its core business, with batteries growing in importance over time. Consequently,
 - ▣ This will remain a low growth company, with revenues from oil stagnant or dropping, and much of the growth coming from its battery business.
 - ▣ While margins will rebound from 2020 lows, the company will have to struggle to get to double digit margins, even if the battery business grows.
 - ▣ While reinvestment driven by growth will remain low, the company will have to reinvest in technology, just to stay relevant.

Step 2: Check the narrative against history, economic first principles & common sense

18

The Impossible, The Implausible and the Improbable

19

The Impossible

Bigger than the economy

Assuming Growth rate for company in perpetuity > Growth rate for economy

Bigger than the total market

Allowing a company's revenues to grow so much that it has more than a 100% market share of whatever business it is in.

Profit margin > 100%

Assuming earnings growth will exceed revenue growth for a long enough period, and pushing margins above 100%

Depreciation without cap ex

Assuming that depreciation will exceed cap ex in perpetuity.

The Implausible

Growth without reinvestment

Assuming growth forever without reinvestment.

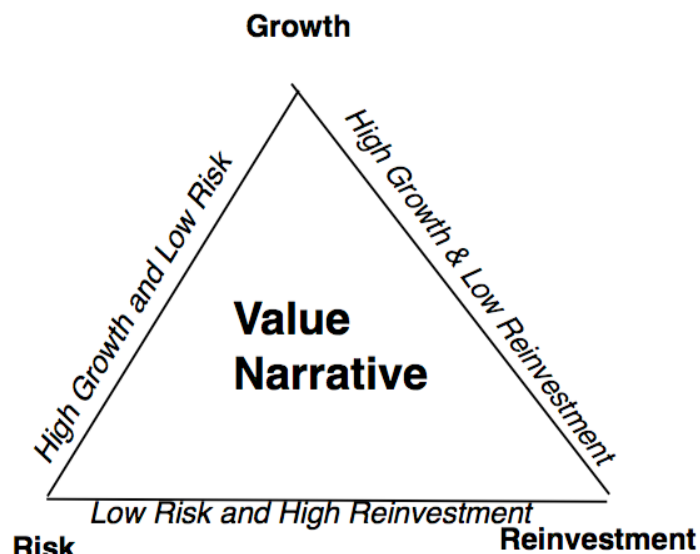

Profits without competition

Assuming that your company will grow and earn higher profits, with no competition.

Returns without risk

Assuming that you can generate high returns in a business with no risk.

The Improbable

The Improbable: Willy Wonkitis

Uber: Possible, Plausible and Probable

The larger & more ambitious your story, the more onus there is on you to show that it is possible, plausible & probable.

The Runaway Story: When you want a story to be true...

- With a runaway business story, you usually have three ingredients:
 1. Charismatic, likeable Narrator: The narrator of the business story is someone that you want to see succeed, either because you like the narrator or because he/she will be a good role model.
 2. Telling a story about disrupting a much business, where you dislike the status quo: The status quo in the business that the story is disrupting is dissatisfying (to everyone involved)>
 3. With a societal benefit as bonus: And if the story holds, society and humanity will benefit.
- Since you want this story to work out, you stop asking questions, because the answers may put the story at risk.

Money

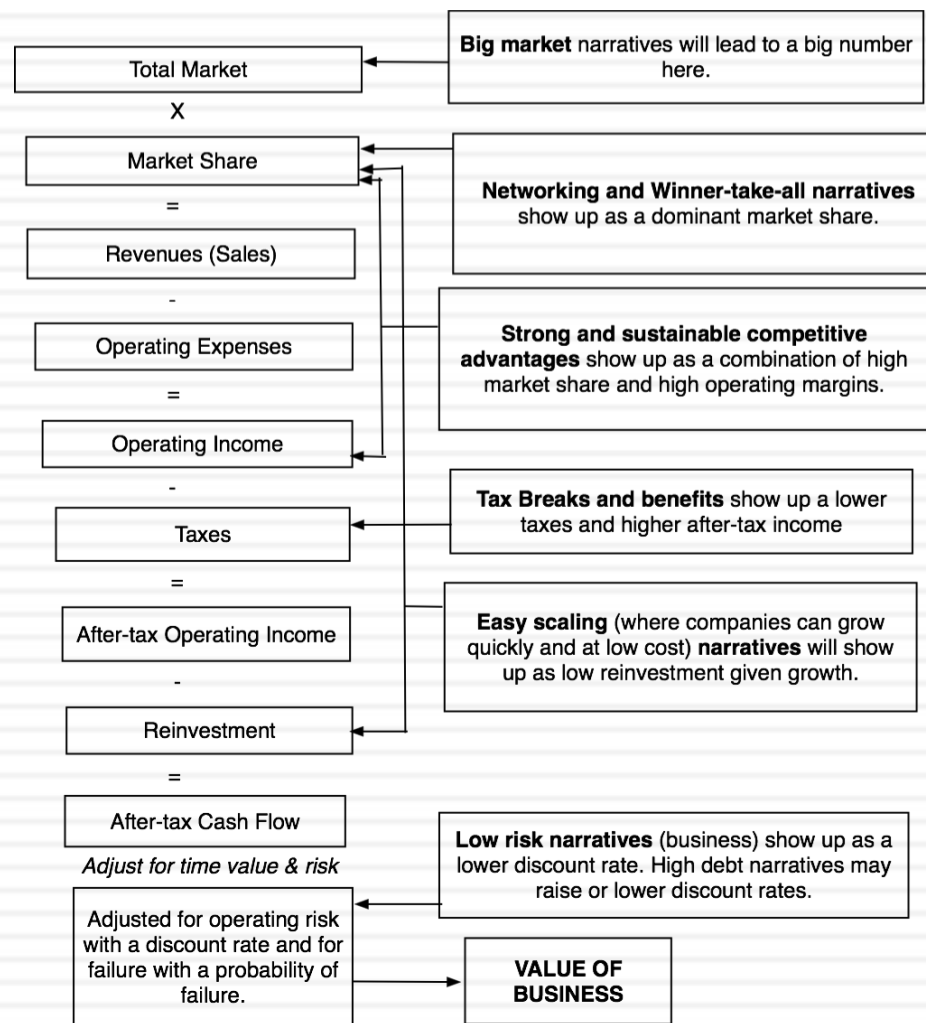

Companies valued at \$1 billion or more by venture-capital firms

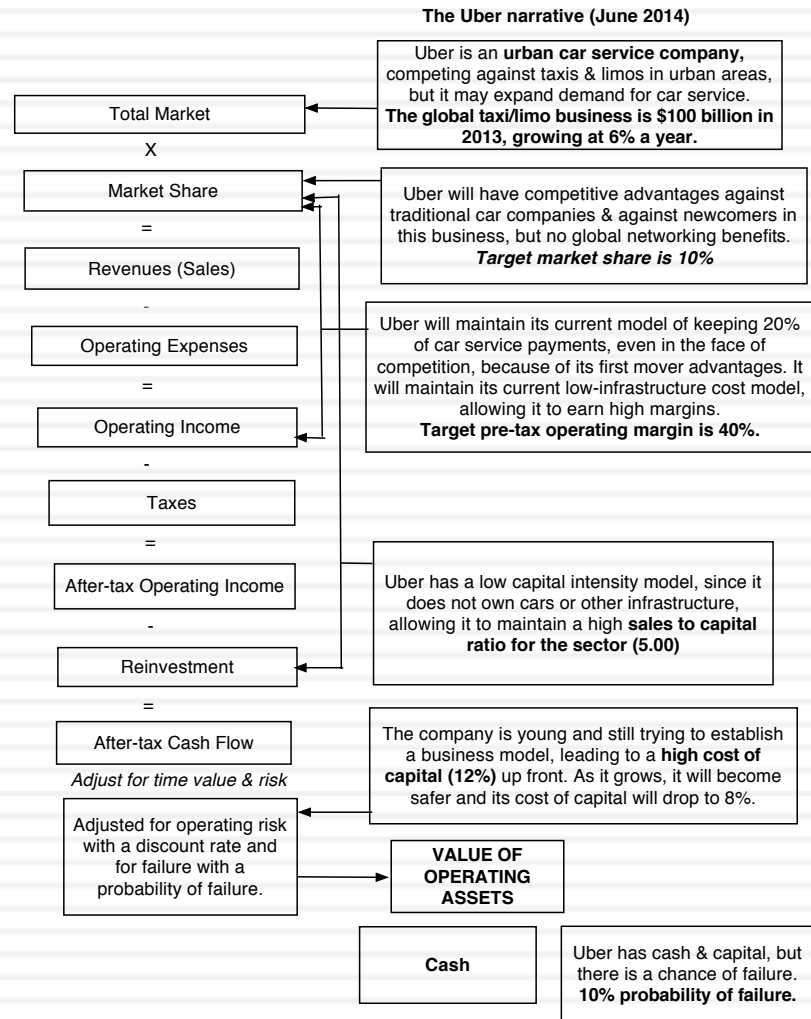

SK Innovation: A Battery Success Story?

- Assume that the story that you are telling is that SK Innovation will wean itself away from the oil business and make itself a green energy company, with a competitive advantage in the battery business, especially with electric cars.
- Building on this story, you argue that you will see double digit growth in revenues, with tech company margins and low reinvestment.
- What are the questions that you would ask to check to see whether this story is possible? Plausible? Probable?

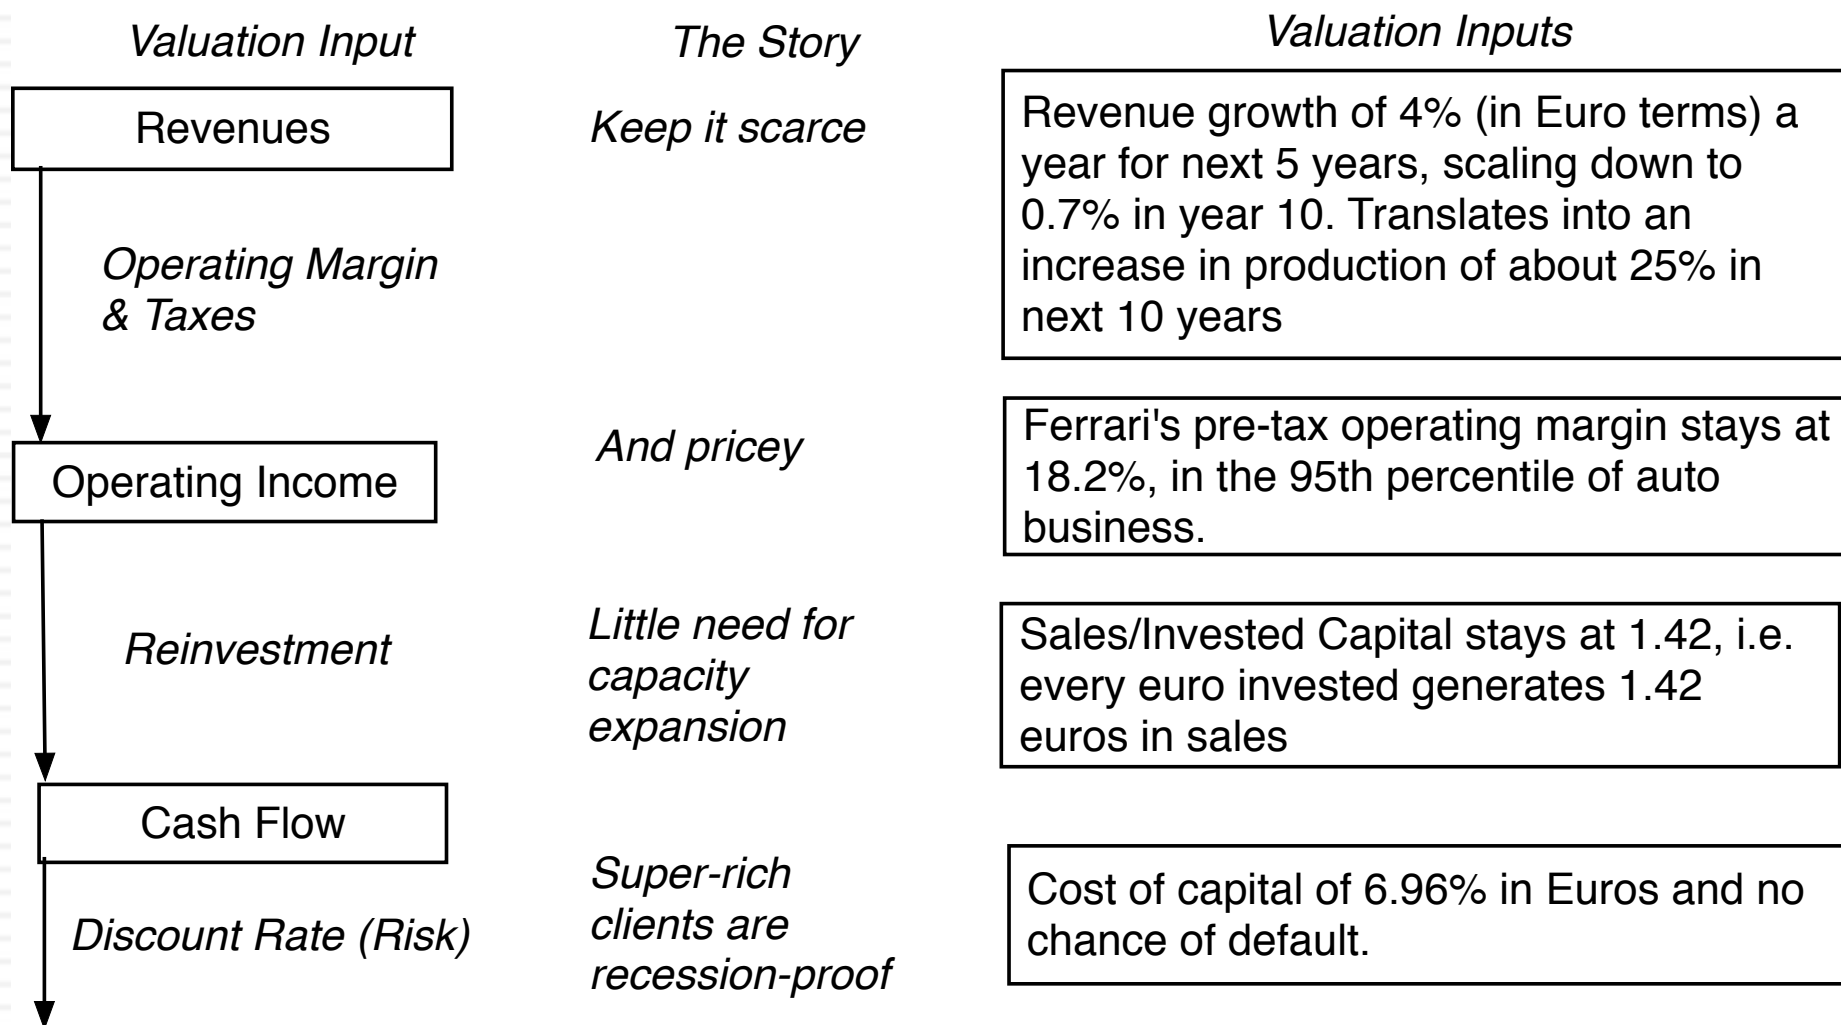

Step 4a: Connect your narrative to key drivers of value

The Uber Link

Ferrari: From story to numbers

Step 4b: Value the company (Uber)

28

The Story

SK Innovation is an oil/chemical business that will see its core businesses continue to stagnate/shrink over time, but will see growth from its battery business, feeding into the growth in electric cars. That growth will over time improve margins and give competitive advantages in what will be a large market.

The Assumptions

	Base year	Next year	Years 2-5	Years 6-10	After year 10	Link to story
Revenues (a)	₩32,357,222	50.0%	5.00%	2.00%	2.00%	Rebound in 2021, Battery growth drives overall company
Operating margin (b)	-0.65%	3.0%	3.00%	7.50%	7.50%	Margins improve from battery business
Tax rate	25.00%		25.00%	25.00%	25.00%	Global/Korean marginal tax rate over time
Reinvestment (c)		10.00	5.00	1.50	29.76%	Live off past capacity & investment for near future
Return on capital	-0.84%	Marginal ROIC =	45.97%		6.72%	Competitive advantages in businesses
Cost of capital (d)			6.40%	6.72%	6.72%	Cost of capital relatively stable, but failure probability based on Ba1 bond rating

The Cash Flows

	Revenues	Operating Margin	EBIT	EBIT (1-t)	Reinvestment	FCFF

Step 5: Keep the feedback loop open

- When you tell a story about a company (either explicitly or implicitly), it is natural to feel attached to that story and to defend it against all attacks. Nothing can destroy an investor more than hubris.
- Being open to other views about a company is not easy, but here are some suggestions that may help:
 - ▣ Face up to the uncertainty in your own estimates of value.
 - ▣ Present the valuation to people who don't think like you do.
 - ▣ Create a process where people who disagree with you the most have a say.
 - ▣ Provide a structure where the criticisms can be specific and pointed, rather than general.

The Uber Feedback Loop: Bill Gurley

32

1. Not just car service company.: Uber is a car company, not just a car service company, and there may be a day when consumers will subscribe to a Uber service, rather than own their own cars. It could also expand into logistics, i.e., moving and transportation businesses.
2. Not just urban: Uber can create new demands for car service in parts of the country where taxis are not used (suburbia, small towns).
3. Global networking benefits: By linking with technology and credit card companies, Uber can have global networking benefits.

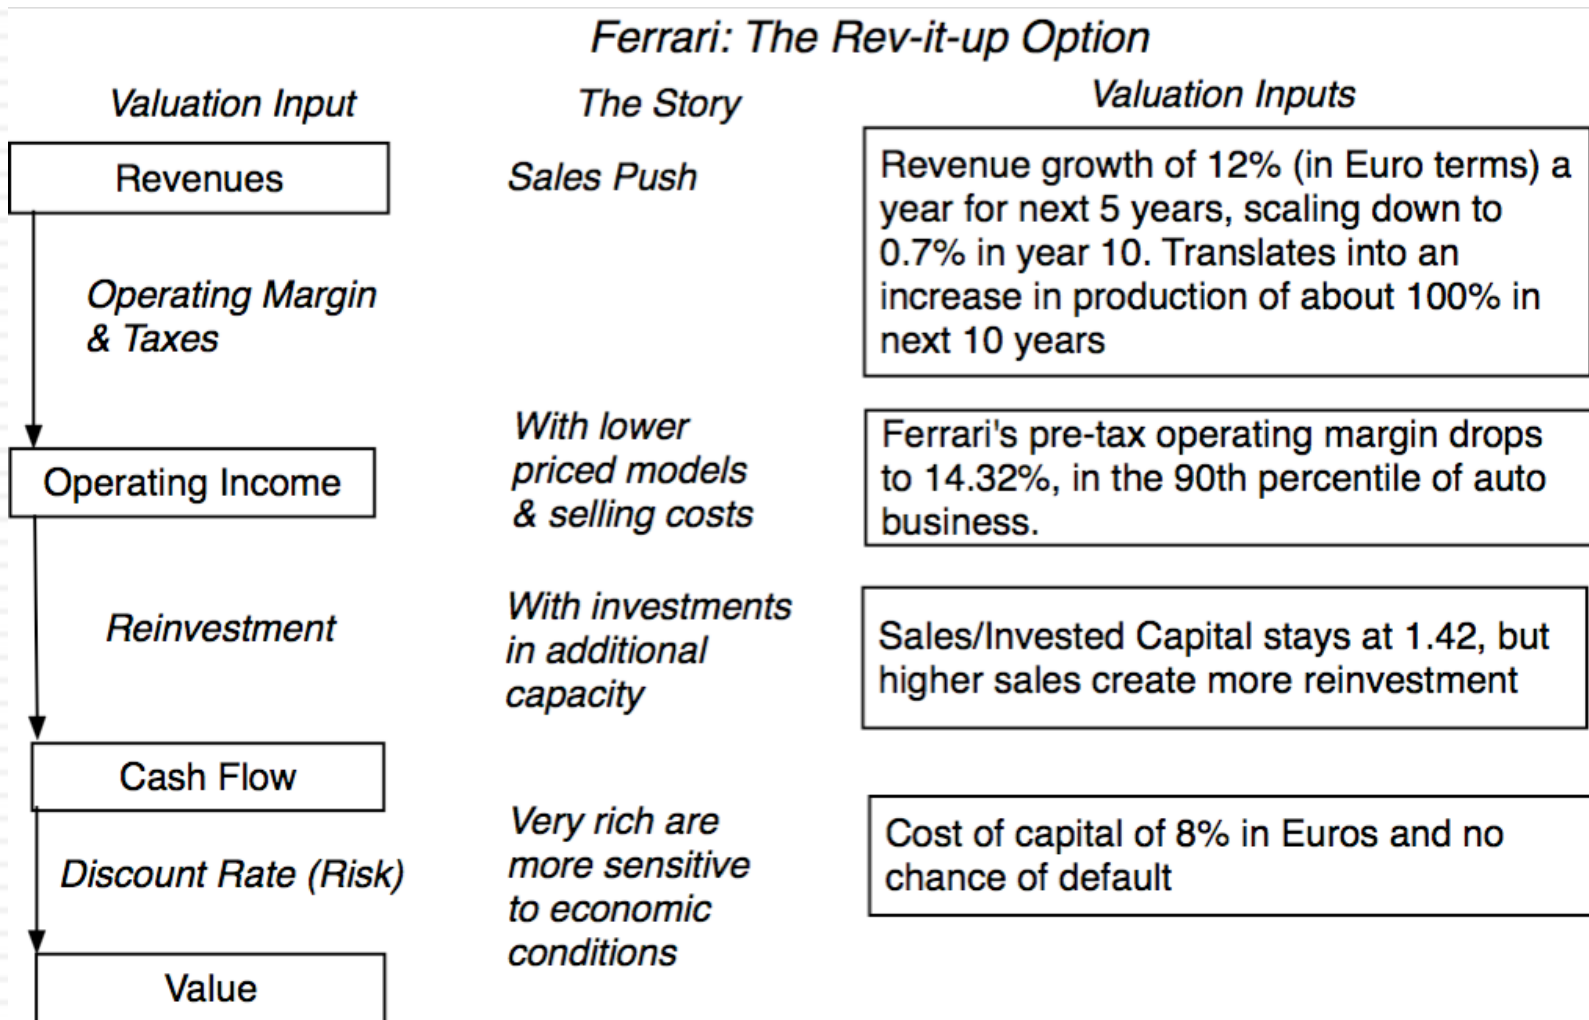

Valuing Bill Gurley's Uber narrative

	<i>Uber (Gurley)</i>	<i>Uber (Gurley Mod)</i>	<i>Uber (Damodaran)</i>
Narrative	Uber will <u>expand the car service market substantially</u> , bringing in mass transit users & non-users from the suburbs into the market, and use its <u>networking advantage</u> to gain a <u>dominant market share</u> , while maintaining its revenue slice at 20%.	Uber will <u>expand the car service market substantially</u> , bringing in mass transit users & non-users from the suburbs into the market, and use its <u>networking advantage</u> to gain a <u>dominant market share</u> , while cutting prices and margins (to 10%).	Uber will expand the car service market moderately, primarily in urban environments, and use its <u>competitive advantages</u> to get a <u>significant but not dominant market share</u> and maintain its revenue slice at 20%.
Total Market	\$300 billion, growing at 3% a year	\$300 billion, growing at 3% a year	\$100 billion, growing at 6% a year
Market Share	40%	40%	10%
Uber's revenue slice	20%	10%	20%
Value for Uber	\$53.4 billion + Option value of entering car ownership market (\$10 billion+)	\$28.7 billion + Option value of entering car ownership market (\$6 billion+)	\$5.9 billion + Option value of entering car ownership market (\$2-3 billion)

Lower Prices +
Some selling
cost = Lower
operating
margin

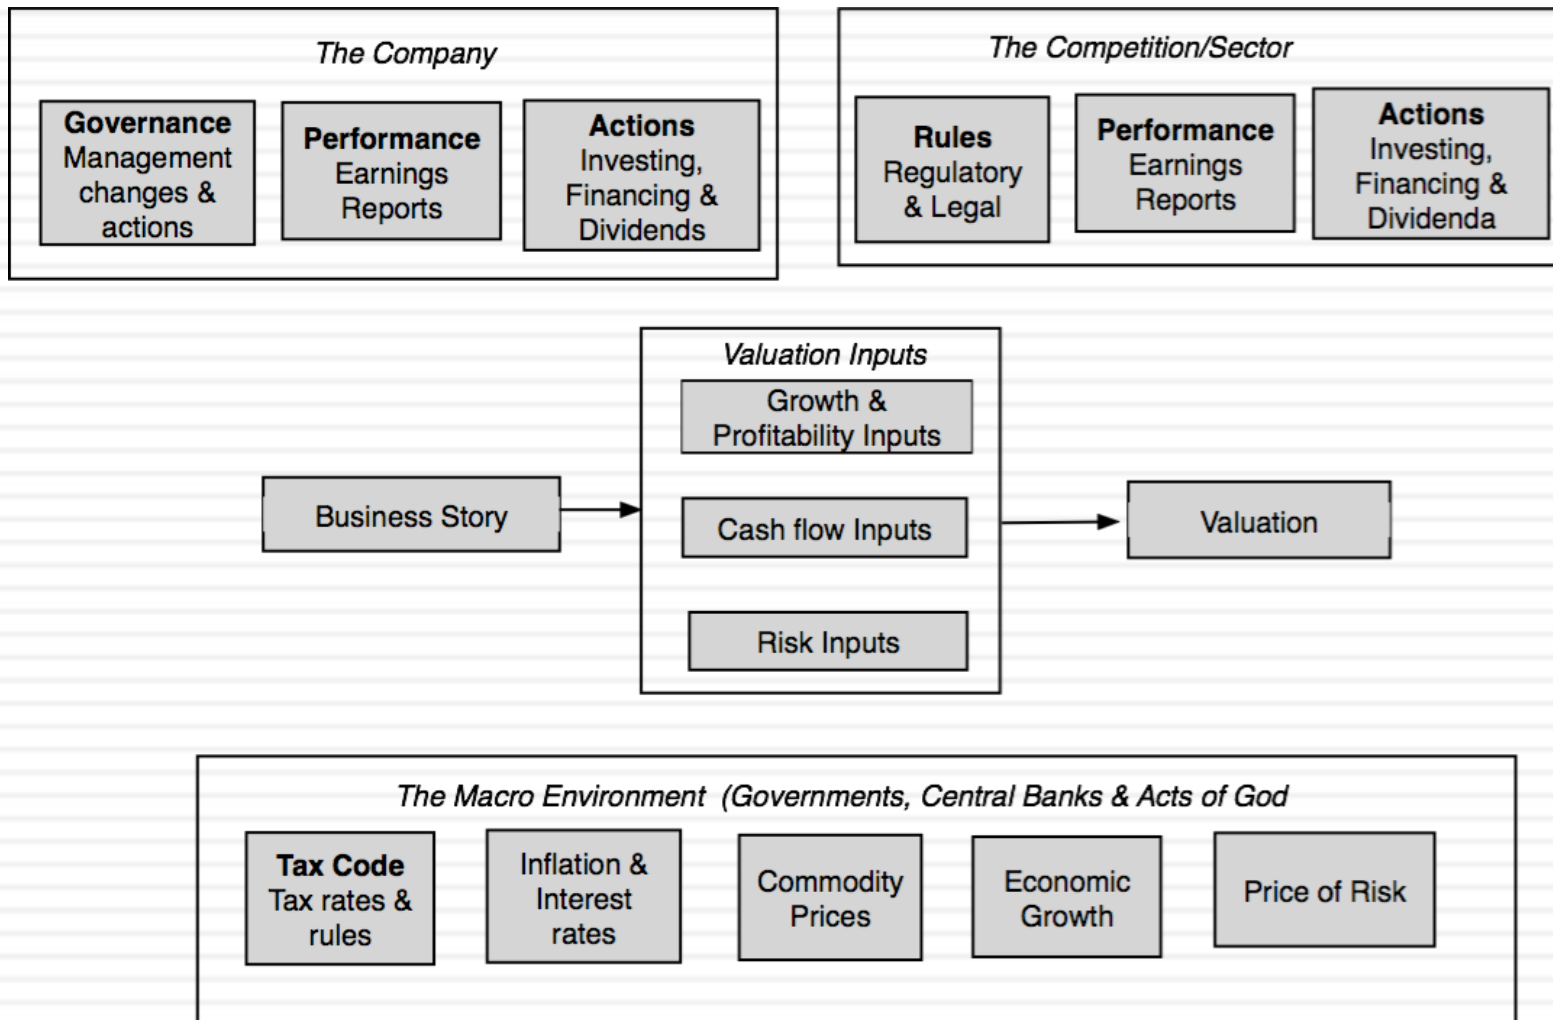

Reinvestment
reflects
higher sales

The very
rich are
more
sensitive to
economic
conditions

And the world is full of feedback.. My Ferrari afterthought!

Why narratives change

How narratives change

39

Narrative Break/End	Narrative Shift	Narrative Change (Expansion or Contraction)
Events, external (legal, political or economic) or internal (management, competitive, default), that can cause the narrative to break or end.	Improvement or deterioration in initial business model, changing market size, market share and/or profitability.	Unexpected entry/success in a new market or unexpected exit/failure in an existing market.
Your valuation estimates (cash flows, risk, growth & value) are no longer operative	Your valuation estimates will have to be modified to reflect the new data about the company.	Valuation estimates have to be redone with new overall market potential and characteristics.
Estimate a probability that it will occur & consequences	Monte Carlo simulations or scenario analysis	Real Options

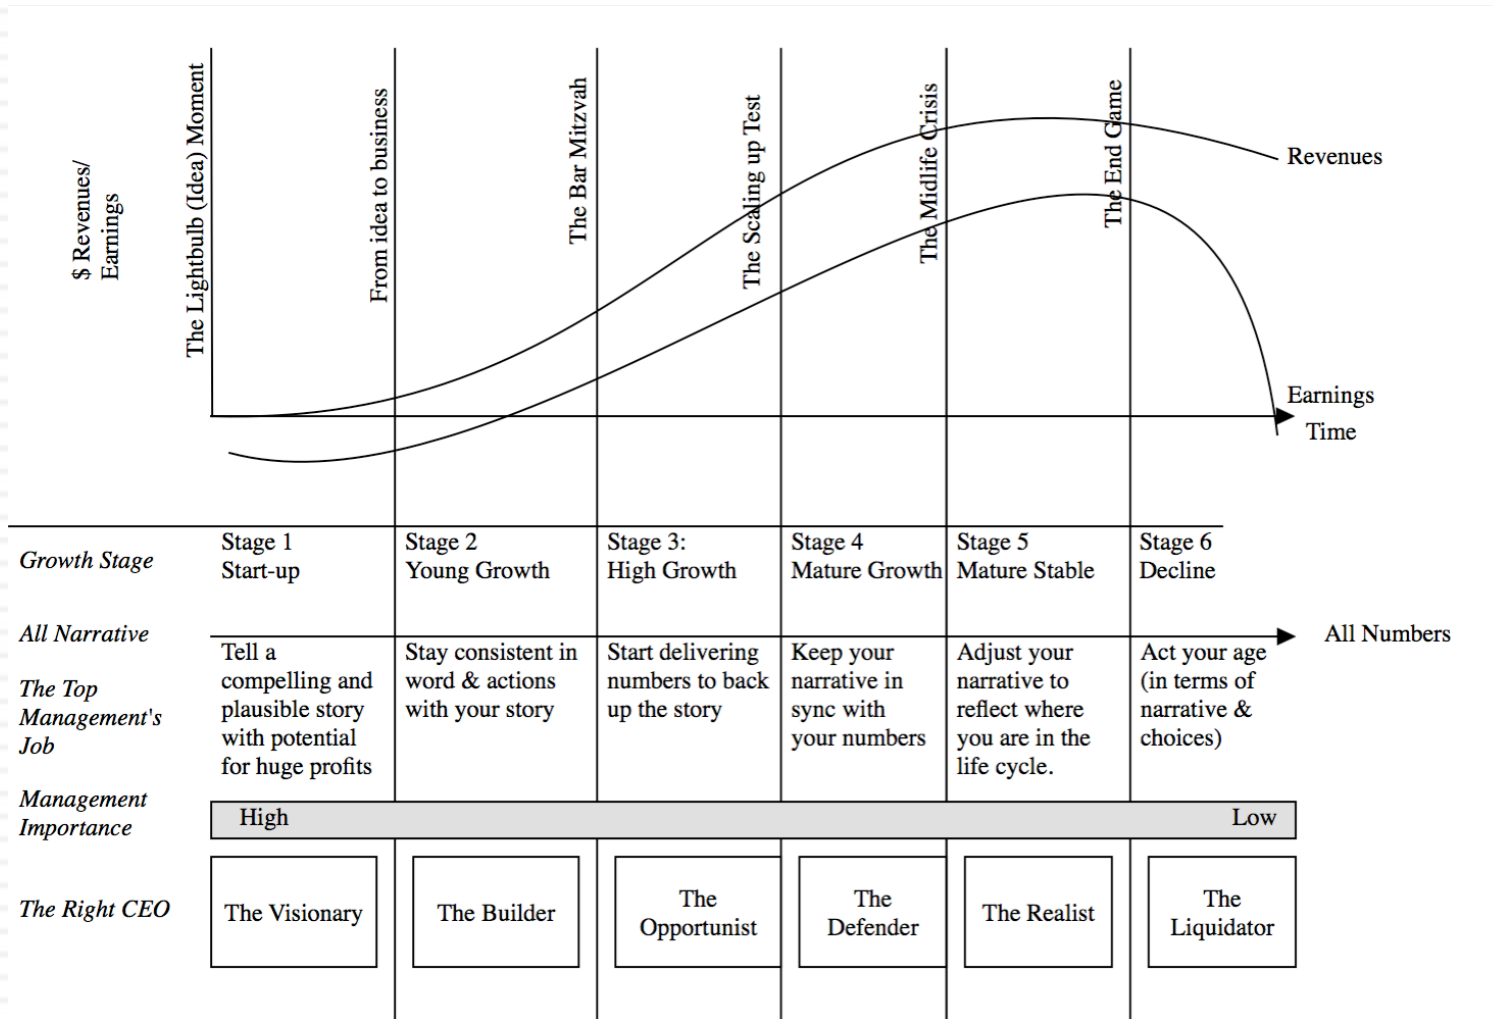

When a crisis hits, the dark side beckons...

- During a crisis, you will be told that you can no longer value companies with fundamentals, and that you have to play the trading game.
- If your concept of valuation is downloading last year's financials for a company into a spread sheet and then using historical growth rates, with some mean reversion thrown in, to forecast future numbers, they are right.
- If your notion of valuation is more dynamic and forward-looking, it is precisely at times like these that you need to go back to basics.

And the dark side beckons...

- If your concept of valuation is downloading last year's financials for a company into a spread sheet and then using historical growth rates, with some mean reversion thrown in, to forecast future numbers, you are probably feeling lost right now, and with good reason.
- It is also not a time to wring our hands, complain that there is too much uncertainty and argue that the fundamentals don't matter.
 - If you do so, you will be drawn to the dark side of investing, where fundamentals don't matter (paradigm shifts, anyone?), new pricing metrics get invented and you are at the mercy of mood and momentum.
- Ironically, it is precisely at times like these that you need to go back to basics.

The Managerial Challenge

The Compressed Life Cycle?

The Consequences

- When life cycles were long, stretching over decades, time and aging allowed for smoother transitions, since CEOs aged with their companies, and moved on.
- As life cycles shorten, managers are far more likely to find their companies changing under them so quickly that they can no longer adapt.
 - To be a long tenured CEO, you will either need to be versatile and/or be able to delegate the work that you cannot do to people you empower and trust.
 - If these transitions are not well managed, there will be far more turnover in top management and activist investing will flourish.

The End

“There is no real ending. It’s just the place where you stop the story.”
