

USER AND SUBSCRIBER ECONOMICS: VALUE DYNAMICS

CFA Session, November 2017

The Set Up

Uber, The Global Logistics Company with a behavior problem (June 2017)

The Story

Uber is a logistics company, doubling the market size by drawing in new users. It will enjoy weak global networking benefits while seeing its slice of revenues slip (85/15), higher costs (with drivers as partial employees) and low capital intensity. *The extracurricular problems at the company, with its legal tangle with Google's Waymo division and accusations of condoning of sexual harassment will slow the company down in the near term but not damage it enough to alter its story significantly.*

The Assumptions

	Base year	Years 1-5	Years 6-10	After year 10	Story link
Total Market	\$200,000	Grow 10.39% a year		Grow 1.5% a year	Delivery & Moving + Ridesharing
Gross Market Share	10.00%	10%>40%		40%	Big player
Revenue Share	20.00%	20% -> 15%		15.00%	Lower revenue share
Operating Margin	-43.08%	-43.08% ->20%		20.00%	Cost pressures continue
Reinvestment	NA	Sales to capital ratio of 3.00		Reinvestment rate = 7.5%	More capital investment model
Cost of capital	NA	10.00%	10%->8.00%	8.00%	At 75th percentile of US firms
Risk of failure	5% chance of failure, if pricing meltdown leads to capital being cut off				Cash on hand + Capital access

The Cash Flows

	Total Market	Market Share	Revenues (15% of Gross)	EBIT (1-t)	Reinvestment	FCFF
1	\$ 220,780	13.00%	\$ 8,826	\$ (2,105)	\$ 775	\$ (2,880)
2	\$ 243,719	16.00%	\$ 11,309	\$ (1,983)	\$ 828	\$ (2,811)
3	\$ 269,041	19.00%	\$ 13,930	\$ (1,564)	\$ 874	\$ (2,438)
4	\$ 296,995	22.00%	\$ 16,661	\$ (820)	\$ 911	\$ (1,731)
5	\$ 327,853	25.00%	\$ 19,466	\$ 270	\$ 935	\$ (665)
6	\$ 361,917	28.00%	\$ 22,294	\$ 1,715	\$ 943	\$ 772
7	\$ 399,520	31.00%	\$ 25,080	\$ 3,511	\$ 929	\$ 2,583
8	\$ 441,030	34.00%	\$ 27,741	\$ 3,884	\$ 887	\$ 2,997
9	\$ 486,853	37.00%	\$ 30,173	\$ 4,224	\$ 811	\$ 3,414
10	\$ 537,437	40.00%	\$ 32,246	\$ 4,514	\$ 691	\$ 3,823
Terminal year	\$ 548,723	40.00%	\$ 32,923	\$ 4,609	\$ 484	\$ 4,125

The Value

Terminal value	\$ 69,920		
PV(Terminal value)	\$ 28,479		
PV (CF over next 10 years)	\$ (2,103)		
Value of operating assets =	\$ 26,376		
Probability of failure	5%		
Value in case of failure	\$ -		
Adjusted Value for operating assets	\$ 25,057		
+ Cash on hand	\$ 5,000		
+ Cross holdings	\$ 6,000		
Value of all assets	\$ 36,057	Most recent pricing put the price at greater than \$70 billion	

Push back on Uber Valuation

- Input disagreement: Lots of inputs and assumptions and I could be wrong on any or all of them..
- Model debate: DCF was designed for old economy companies and not suited to new economy firms that are more focused on accumulating users & subscribers, making them stick with the firm and sell them products & services over long periods.
- DCF is flexible: DCF models are much more flexible than most people give them credit for, and that they can be modified to reflect other frameworks. If you have a problem with a DCF value, it should not be with the model but with the person using that model.

DCF: Aggregated versus Disaggregated Valuation

- DCF First Principle: The value of a business is the present value of the expected cash flows from that business, with the discount rate adjusted for risk. That is true for any business, manufacturing or service, small or large, old economy or new economy.
- Aggregated versus Disaggregated Valuation: In aggregated valuation, you value the entire company, consolidating its revenues, earnings and cash flows. You could value a company on a disaggregated business based upon
 - The Different Businesses it is in (Sum of the Parts Valuation)
 - The Different Geographies it operates in
 - The Units that it generates revenues from (Subscribers, Users)

Why disaggregated valuation?

- Incorporate key differences: In aggregated valuation, you miss key differences across disaggregated units (business, geographies, products, users) as well as the missing of competitive advantages that apply only to some units of the business and not to others. With disaggregated valuation, you can bring these in.
- Connect stories to value: If the story being told by a business person or entrepreneur is a unit-based story (users, subscribers), building a valuation that is related to those units is better.
- Connect to better business decisions: To the extent that insiders can obtain the information to value a business on a disaggregated basis, you can use that information to improve the way the company is run and to increase its value.

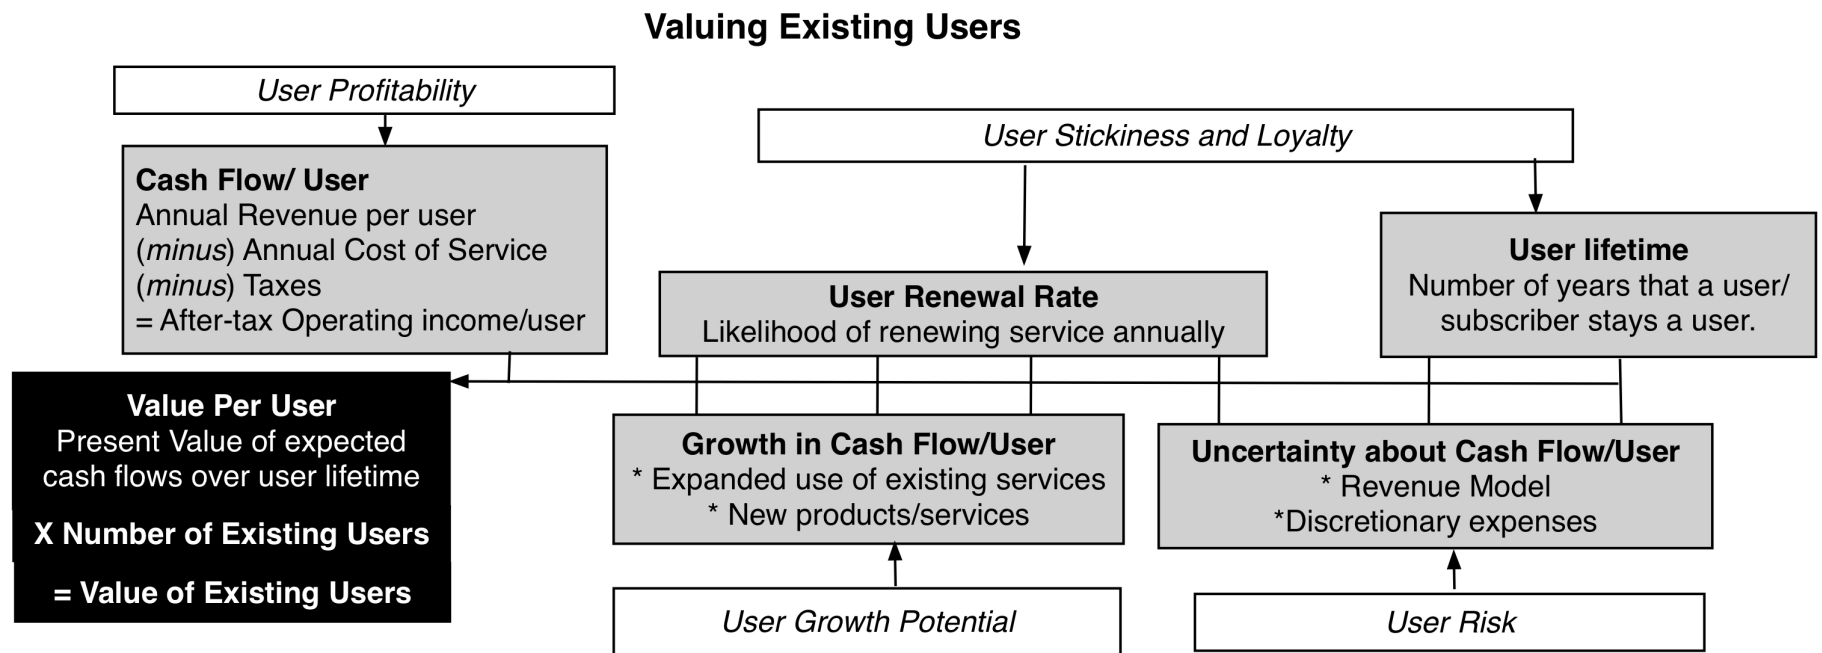

User Based Valuation- Structure

User/ Subscriber/Member Based Valuation

- A user, subscriber or member has value only because he/she generates revenues for the company. The key to valuing a unit then becomes identifying the link to cash flows and value.
- To **value users**, you have to value an individual user first and then estimate the cost of acquiring new users.
 - The value of an existing user is the present value of the expected cash flows that you will generate from that user, over the lifetime that he or she remains a user.
 - The value of a new user will be the value of a user, net of the cost of acquiring a user.
 - The aggregate value of users will be the sum of the values of existing and new users.
- To get to the **value of a company**, you have to net out the other centralized/non-user specific costs that it will face.

Valuing Existing Users

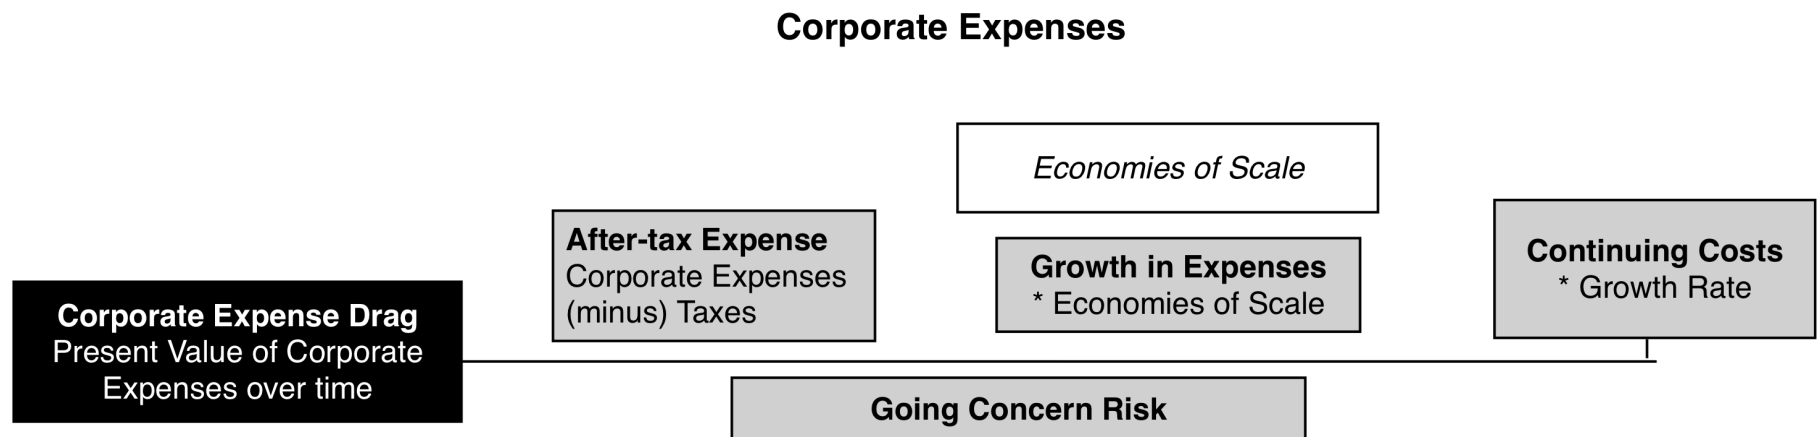

Valuing New Users

Valuing Corporate Drag

What are these?

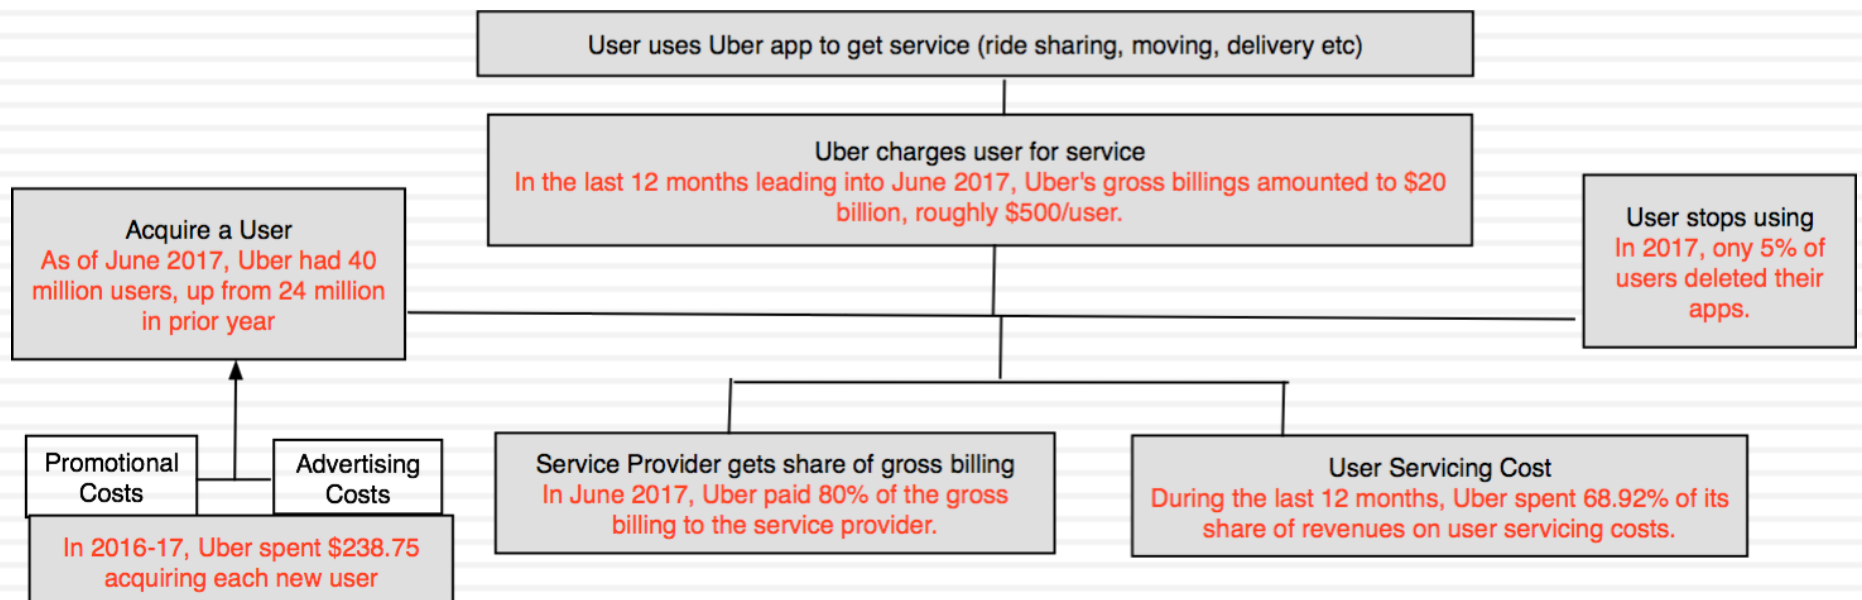

A user/subscriber/member based company usually has expenses that are not directly related to acquiring or keeping its constituents, but are central to keeping the business going.

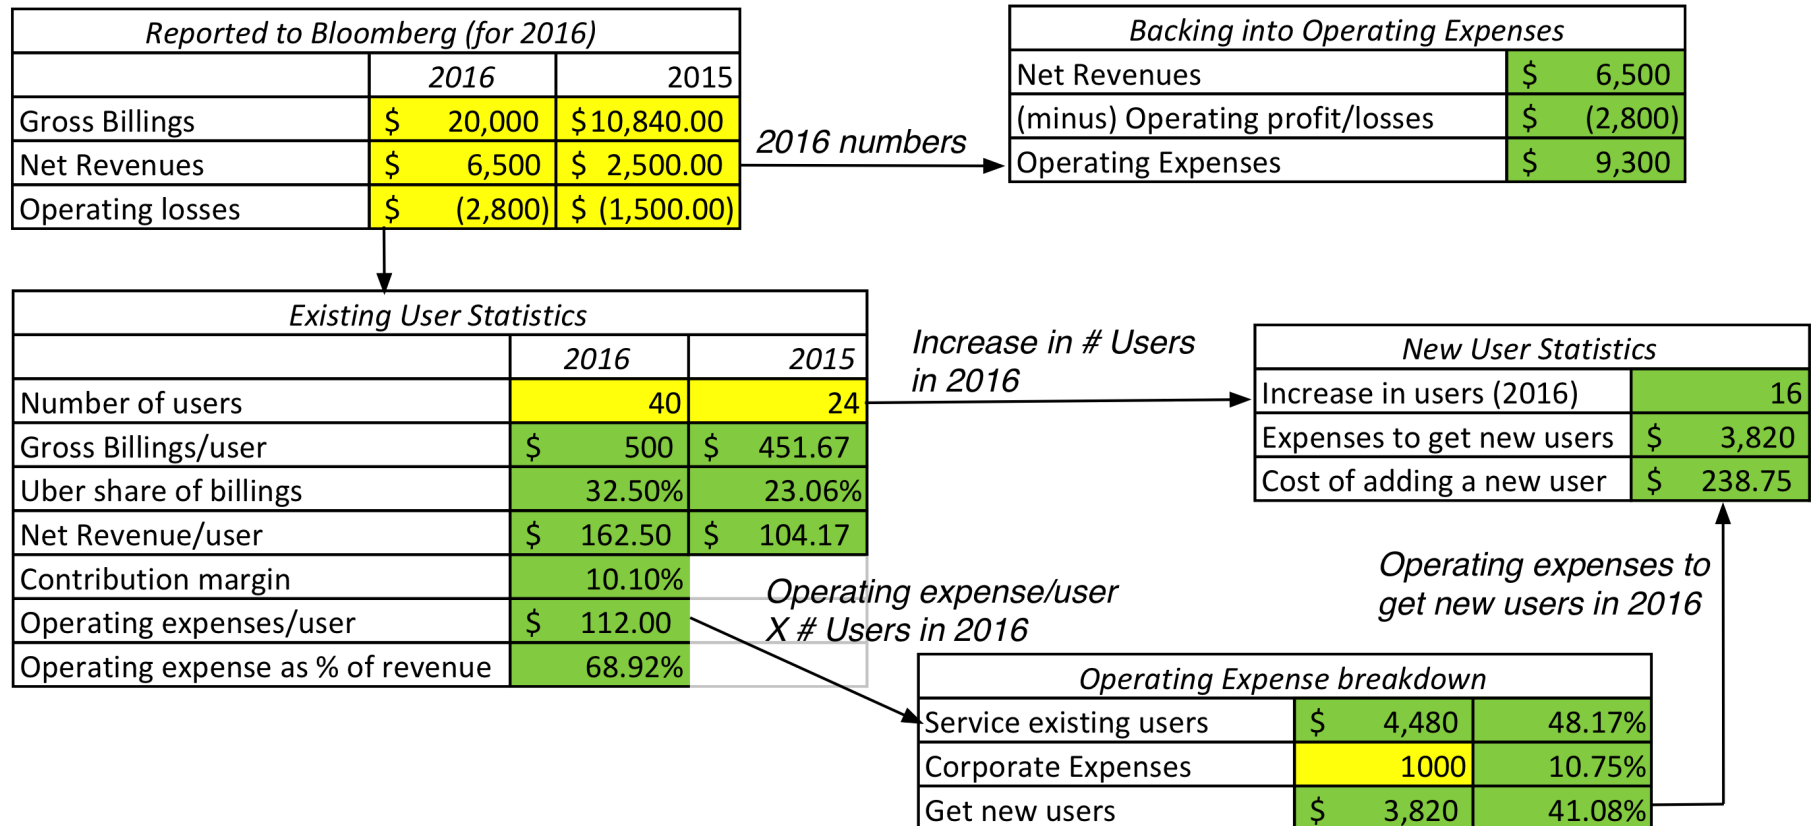

A User-based Valuation of Uber

Uber User Economics

Uber: Deconstructing the Financials

Deconstructing Uber's Financials

Uber's Existing User Value

Growth rate in Operating Expenses
Assumed that 80% of operating expenses are variable. Growth rate is 9.9% /year.

Growth rate in Revenues
Assumed 12% growth in annual revenues/user over next 15 years

User Lifetime
Assumed to be 15 years, with an annual renewal probability of 95%.

Value of Existing Users: Uber

	Base	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

Life of user =	20.00										
Value per Prime Member =	\$ 486.29										
Number of Prime Members =	85.00										
Value of Prime Members =	\$ 41,334.69										

Prime Member spends \$600 more, annually, than non-Prime Member

Annual Renewal Rate = 96%

Continues through year 20, growing at inflation rate.

Growth rate is 10% for years 1-5, scaling down to inflation rate.

Pre-tax Operating Margin improves slightly to 13%

Service Cost, currently \$10/member, rises at 5%/year, yrs 1-5 & inflation rate after.

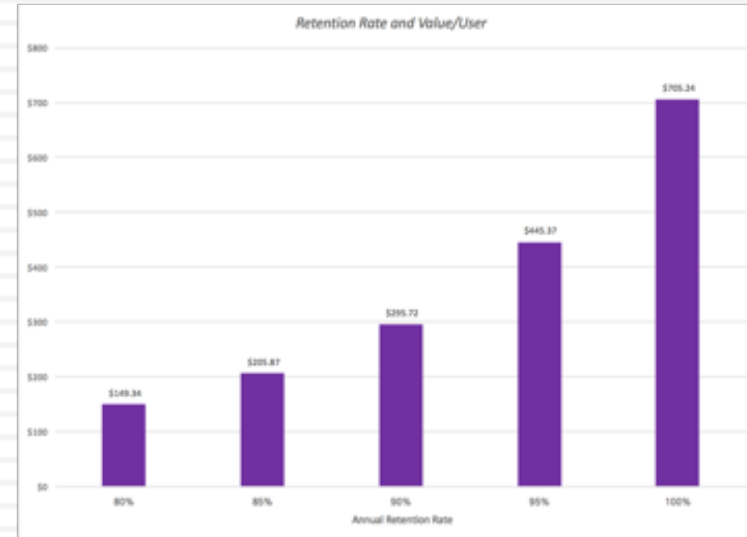

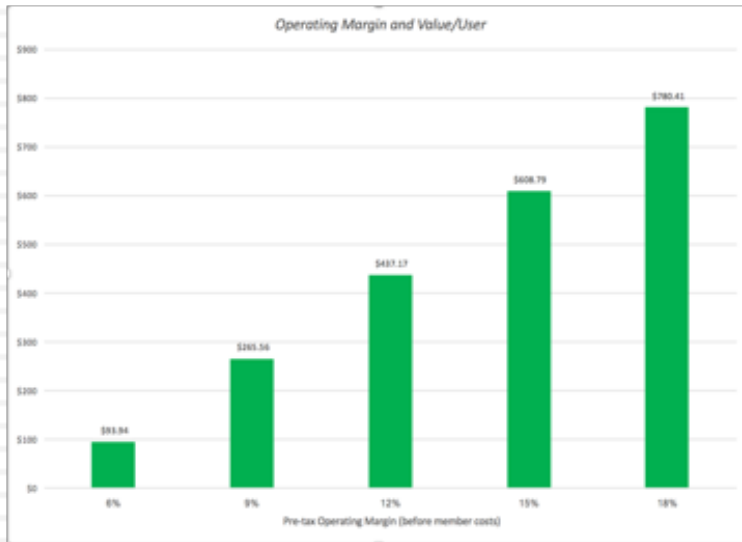

US corporate tax rate will be 25% in steady state.

Average Membership fee across members

Current Shipping Cost is \$119.85/member. Will grow at 3%, years 1-5, and inflation rate thereafter.

Used a 8% cost of capital, close to Amazon's current cost of capital.

What's driving Amazon user value?

Valuing Amazon's New Members

Cost of acquiring a new member is currently \$100

Cost of acquiring new Member =	\$	100.00										
Value per new user (in today's \$) =	\$	386.29										
	Base Year	1	2	3	4	5	6	7	8	9	10	
Total Prime Members	85.00	94.35	106.64	120.78	136.83	155.01	157.74	159.77	161.78	163.82	165.88	
New Members	0.00	12.75	16.07	18.41	20.88	23.66	8.93	8.33	8.41	8.51	8.62	
Value per new Member	\$386.29	\$392.08	\$397.97	\$403.94	\$409.99	\$416.14	\$422.39	\$428.72	\$435.15	\$441.68	\$448.31	
Value added by new Members		\$4,999.08	\$6,393.32	\$7,434.80	\$8,559.90	\$9,844.28	\$3,773.32	\$3,572.91	\$3,657.50	\$3,758.42	\$3,862.82	
Terminal Value (New Members)											\$29,536.54	
Present Value		\$ 4,628.78	\$ 5,481.25	\$ 5,901.98	\$ 6,291.78	\$ 6,699.85	\$ 2,377.83	\$ 2,084.76	\$ 1,976.03	\$ 1,880.15	\$ 15,470.37	
Value Added by New Users	\$ 52,792.78											

New Users grows 15% in yr 1-5 and 5% thereafter.

User growth continues at riskfree rate in perpetuity.

Discounted back at 8%, the cost of capital for Amazon today.

Value of new user = Value of Existing user - Cost of acquiring New User = \$486.29 - \$100, growing at inflation rate (2%) every year.

Divvying up Technology/Content Costs

Value Drag of Corporate Expenses (Cost)											
Total Media & Content Costs	\$ 16,085.00										
Amazon Prime Share of Expenses (%)	10.00%										
Total Prime Members	85.00	94.35	106.64	120.78	136.83	155.01	157.74	159.77	161.78	163.82	165.88

- PV of Corporate Expenses	\$32,846
Value of Amazon Prime	\$61,281

User-based Value Dynamics

I. User Cost Propositions

- Profits are better than losses: If you are an investor in a business, you would rather that the business make money than lose money.
- Young companies lose money: If you have a young company, you should expect the company to make losses, even if it is a valuable business.
- Not all losses are created equal: For young growth companies, dependent upon users or subscribers, there are good ways to lose money and bad ways to lose money.
- Investor beware: To invest in these companies, you need to know why they lost money, not just how much.

a. Existing User versus New User Costs

User Value Proposition 1: A money-losing company that is losing money providing service to existing users/customers is worth less than a company with equivalent losses, where the primary expenses are coming from customer acquisitions.

<i>% of Operating Expenses spent on acquiring new users</i>	<i>Value of Existing Users</i>	<i>Value of New Users</i>	<i>Uber User Value</i>	<i>% of Value from Existing users</i>
0%	\$ 6,167	\$ 18,147	\$ 24,314	25.36%
20%	\$ 10,619	\$ 19,035	\$ 29,654	35.81%
40%	\$ 15,071	\$ 19,923	\$ 34,994	43.07%
60%	\$ 19,523	\$ 20,811	\$ 40,334	48.40%
80%	\$ 23,974	\$ 21,699	\$ 45,673	52.49%
100%	\$ 28,426	\$ 22,587	\$ 51,013	55.72%

b. Fixed versus Variable Costs

- **User Value Proposition 2:** A company whose expenses are primarily fixed (will not grow with revenues) will be worth more than an otherwise identical company whose expenses are variable (track revenues).

% of current expenses that are fixed	Value of Existing Users	Value of New Users	Uber User Value	% of Value from Existing users
0%	\$ 14,733	\$ 15,250	\$ 29,983	49.14%
20%	\$ 16,412	\$ 20,191	\$ 36,603	44.84%
40%	\$ 17,834	\$ 24,373	\$ 42,207	42.25%
60%	\$ 19,040	\$ 27,924	\$ 46,964	40.54%
80%	\$ 20,068	\$ 30,949	\$ 51,017	39.34%
100%	\$ 20,947	\$ 33,536	\$ 54,483	38.45%

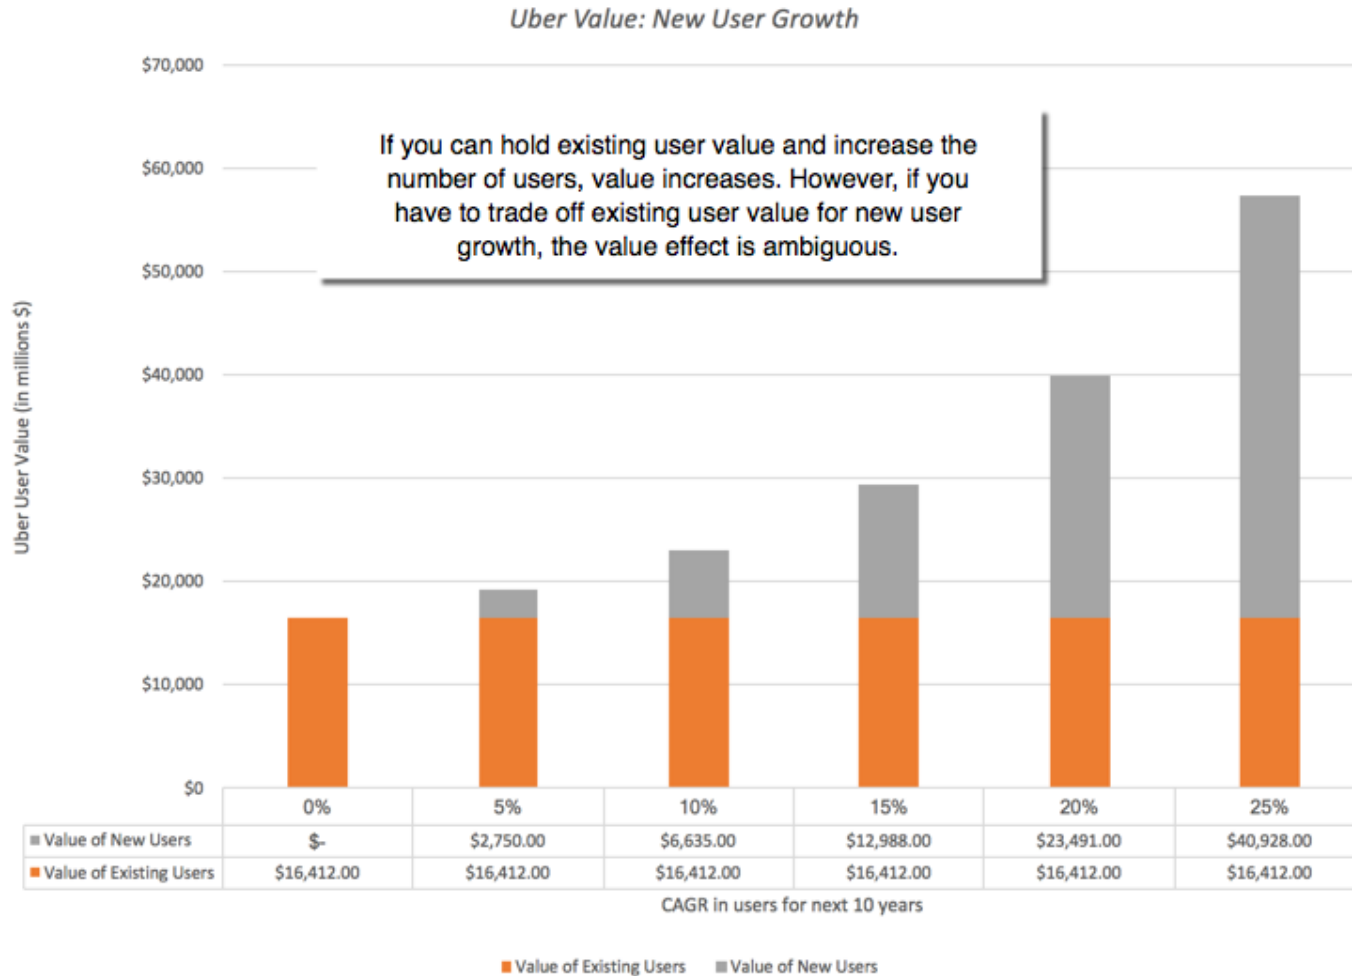

II. User Growth Propositions

- For young companies, we generally view growth as good and reward companies with higher growth rates with higher value.
- Not all growth is created equal. Some growth strategies create more value than others and some may even destroy value.
- In a user or subscriber based model, there are two ways you can grow your revenues. One is to get existing users to buy more of your product or service or perhaps other products and services that you come up with. The other is by trying to acquire new users.

a. Growth from Existing Users

b. Growth from New Users

Growth and Value

- **User Value Proposition 3:** A company that is growing revenues by increasing revenues/user is worth more than an otherwise similar growth company that is deriving growth from increasing the number of users/customers.
 - ▣ Young companies face trade offs and the question of whether to allocate resources to get new users or try to sell more to existing users is one of those.
 - ▣ At least in the case of Uber, the numbers seem to indicate that if you have to put priorities, it should be on getting existing users to use the service more than to keep looking for new users.

III. User Business Propositions

- Looking at a company as a user or subscriber based company can be useful in deciphering how and why they make the strategic and business choices that they do.
 - ▣ From Buzz words to value: A user-focus can help us make sense of the focus on “big data” and “networking benefits” that many of these companies have and link them more directly to value.
 - ▣ Revenue Models: A user focus can help determine what type of revenue model (subscription, advertising or transaction) will optimize value for a company.
 - ▣ Real Options: Does a company with a large and loyal customer user base have optionality (leading to a premium being added to its value)? While real options are notoriously difficult to value, in this context, a user focus can give us direction.

a. The Great, the Good, the Bad and the Ugly!

The Mediocre
Low Value Added + Low cost of adding new user

The Disaster
Low Value Added + High cost of adding new user

		Cost of acquiring a new user				
		\$100	\$200	\$300	\$400	\$500
Value per user	\$ 150	\$1,516	-\$10,255	-\$22,025	-\$33,796	-\$45,566
	\$ 300	\$25,172	\$13,401	\$1,631	-\$10,140	-\$21,911
	\$ 450	\$48,828	\$37,057	\$25,287	\$13,516	\$1,745
	\$ 600	\$72,484	\$60,713	\$48,943	\$37,172	\$25,401
	\$ 750	\$96,140	\$84,369	\$72,599	\$60,828	\$49,057
	\$ 900	\$119,796	\$108,025	\$96,255	\$84,484	\$72,713

The Great
High value per user + Low cost of adding new user

The Good
High Value per user + High cost of adding new user

Network Benefits and Big Data: Keys to being exceptional

- **User Value Proposition 4:** The exceptional firm will be the one that is able to find a pathway to high value per user and a low cost to adding a new user in a market where its competitors struggle with either low value per user or high costs of acquiring users.
- The keys to being an exceptional user-based company lie in utilizing:
 - ▣ Network Benefits, to reduce your cost per new user, as you get bigger.
 - ▣ Big Data that you have accumulated on your users to (a) customize existing products/services to meet user preferences, (b) create new products or services that meet perceived user needs or (c) for differential pricing

b. Revenue Models

	<i>Subscription</i>	<i>Transaction</i>	<i>Advertising</i>
<i>User Stickiness (User life & Renewal Probability)</i>	High (High life & renewal probability)	Intermediate (Intermediate life & renewal probability)	Low (Low life & renewal probability)
<i>Revenue per User Predictability (Discount rate)</i>	High (Low Discount Rate)	Low Predictability (High Discount Rate)	Intermediate (Average Discount Rate)
<i>Revenue per User Growth (Annual Growth Rate)</i>	Low (Low growth rate in revenues/user)	Low (High growth rate in revenues/user)	Intermediate (Intermediate growth rate in revenues/user)
<i>Growth rate in users (CAGR in # Users)</i>	Low (Low CAGR in # users)	Intermediate (Intermediate CAGR in # users)	High (High CAGR in # users)
<i>Cost of adding new users (Cost/New User)</i>	High (High Cost/New User)	Intermediate (Middling Cost/New User)	Low (Low Cost/New User)

The “best” revenue model

- **User Value Proposition 5:** The "optimal" revenue model will vary across firms depending upon where they are in the life cycle, the product or service offering and whether they are focused on user growth, revenue growth or revenue sustainability.
- An advertising-based model will allow for much more rapid growth in a firm's early years, a subscription-based model will generate more sustainable growth and a transaction-based model has the greatest potential for revenue growth from existing users.

c. Real Options

Optionality in User Base

The Value of Optionality

- **User Value Proposition 6:** The value of optionality from a user base will be greatest at firms with lots of sticky, intense users in businesses where the future is unpredictable because of changes in product/service technology and customer tastes.
- The value of a real option comes from exclusivity, and to the extent that you have sticky, intense users, you have a base that you can use to experiment with other products and services, with the value scaling up with the number of uses.

Bottom Line

- The most direct applications of a user or subscriber based model is in the valuation of companies like Uber, Facebook and Netflix.
- That said, more and more companies are seeing benefits in shifting from their traditional business models to user-based ones. Apple's billion iPhone users, Amazon's seventy million Prime members and Microsoft's hundred million 365 users are all giving these companies their versions of user-based models.
- Understanding user economics is key to investing in these companies (valuing or pricing) and in managing them.
