

# Corporate Finance

Aswath Damodaran

Stern School of Business

# First Principles

- Invest in projects that yield a return greater than the minimum acceptable hurdle rate.
  - The hurdle rate should be higher for riskier projects and reflect the financing mix used - owners' funds (equity) or borrowed money (debt)
  - Returns on projects should be measured based on cash flows generated and the timing of these cash flows; they should also consider both positive and negative side effects of these projects.
- Choose a financing mix that minimizes the hurdle rate and matches the assets being financed.
- If there are not enough investments that earn the hurdle rate, return the cash to stockholders.
  - The form of returns - dividends and stock buybacks - will depend upon the stockholders' characteristics.

Objective: Maximize the Value of the Firm

## The Classical Viewpoint

- **Van Horne:** "In this book, we assume that the objective of the firm is to maximize its value to its stockholders"
- **Brealey & Myers:** "Success is usually judged by value: Shareholders are made better off by any decision which increases the value of their stake in the firm... The secret of success in financial management is to increase value."
- **Copeland & Weston:** The most important theme is that the objective of the firm is to maximize the wealth of its stockholders."
- **Brigham and Gapenski:** Throughout this book we operate on the assumption that the management's primary goal is stockholder wealth maximization which translates into maximizing the price of the common stock.

## The Objective in Decision Making

- In traditional corporate finance, the objective in decision making is to maximize the value of the firm.
- A narrower objective is to maximize stockholder wealth. When the stock is traded and markets are viewed to be efficient, the objective is to maximize the stock price.
- All other goals of the firm are intermediate ones leading to firm value maximization, or operate as constraints on firm value maximization.

# The Criticism of Firm Value Maximization

- Maximizing stock price is not incompatible with meeting employee needs/objectives. In particular:
  - - Employees are often stockholders in many firms
  - - Firms that maximize stock price generally are firms that have treated employees well.
- Maximizing stock price does not mean that customers are not critical to success. In most businesses, keeping customers happy is the route to stock price maximization.
- Maximizing stock price does not imply that a company has to be a social outlaw.

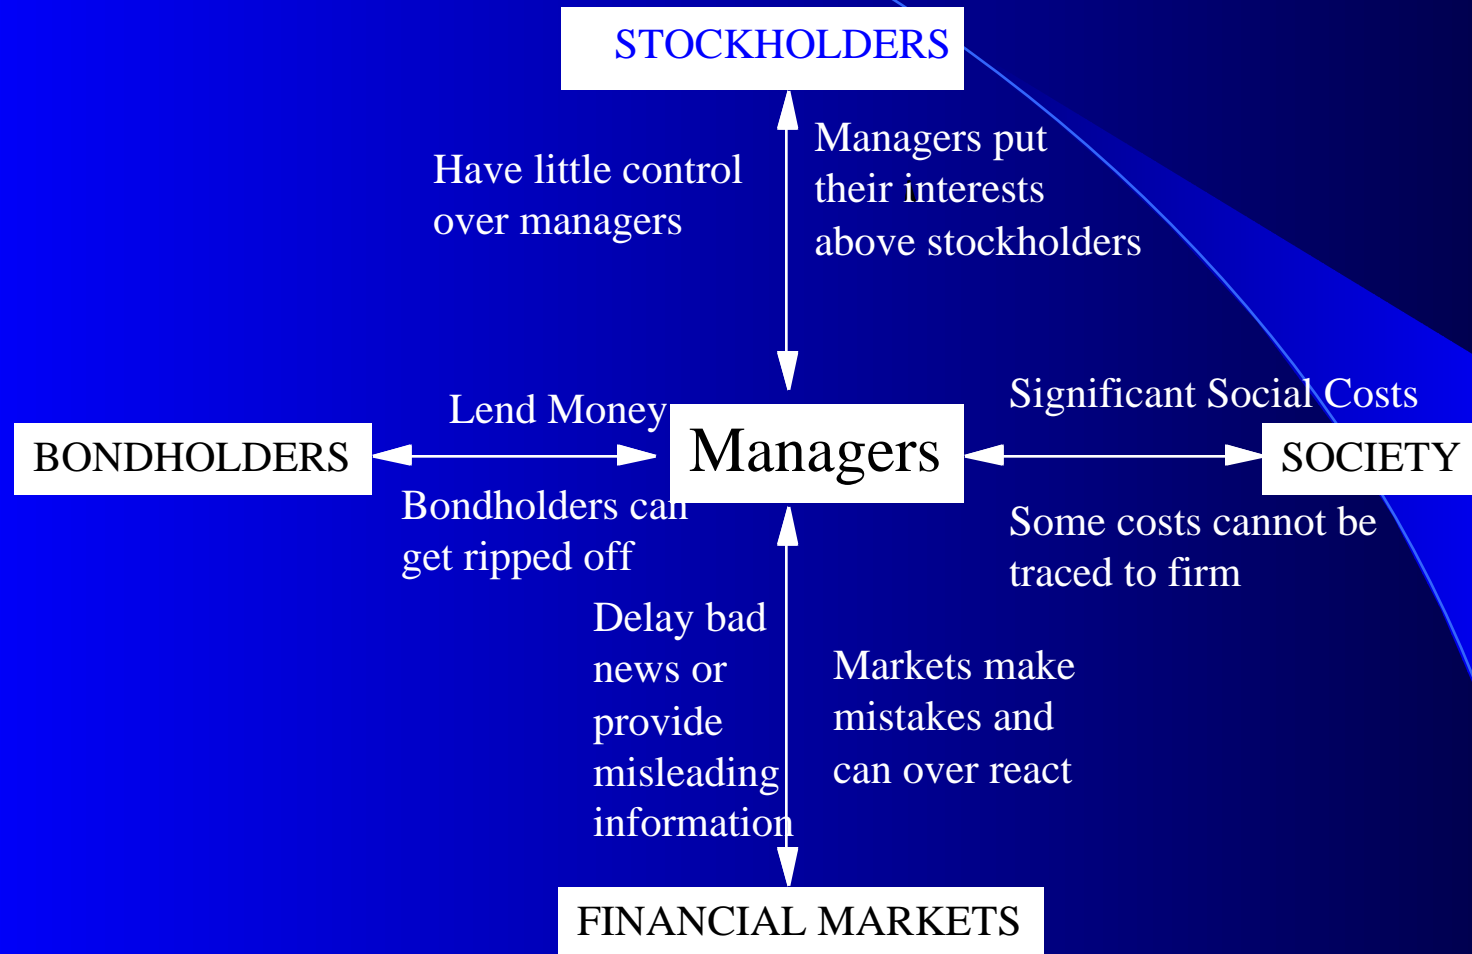

## Why traditional corporate financial theory focuses on maximizing stockholder wealth.

- Stock price is easily observable and constantly updated (unlike other measures of performance, which may not be as easily observable, and certainly not updated as frequently).
- If investors are rational (are they?), stock prices reflect the wisdom of decisions, short term and long term, instantaneously.
- The objective of stock price performance provides some very elegant theory on:
  - how to pick projects
  - how to finance them
  - how much to pay in dividends

# The Classical Objective Function

# What can go wrong?

# THE REAL WORLD INTRUDES .....

## I. Stockholder Interests vs. Management Interests

- **Theory:** The stockholders have significant control over management. The mechanisms for disciplining management are the annual meeting and the board of directors.
- **Practice:** Neither mechanism is as effective in disciplining management as theory posits.

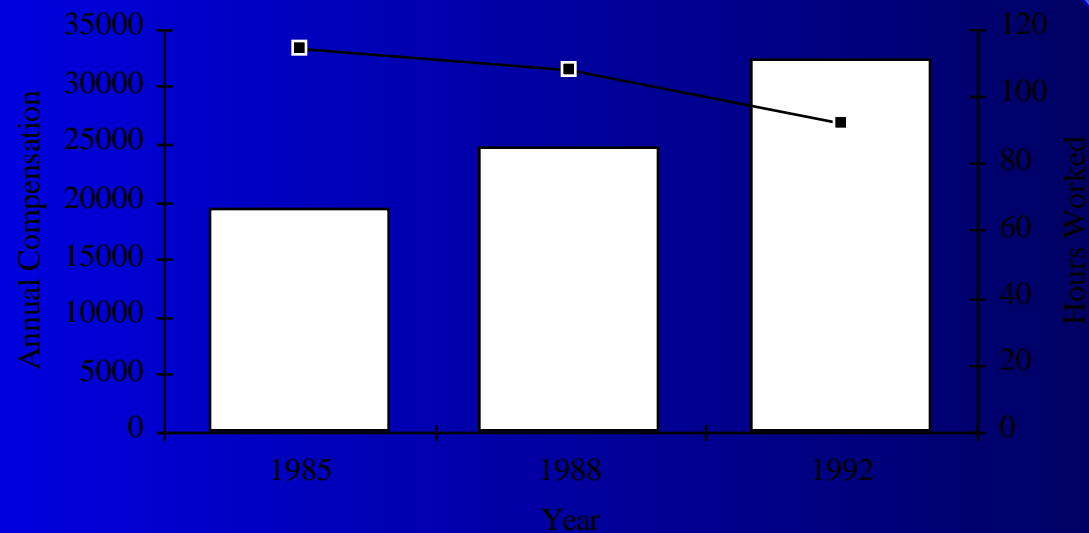

## The Annual Meeting as a disciplinary venue

- The power of stockholders to act at annual meetings is diluted by three factors
  - Most small stockholders do not go to meetings because the cost of going to the meeting exceeds the value of their holdings.
  - Incumbent management starts off with a clear advantage when it comes to the exercising of proxies.
  - For large stockholders, the path of least resistance, when confronted by managers that they do not like, is to vote with their feet.

# Board of Directors as a disciplinary mechanism

- Directors, for the most part, are well compensated and underworked
- 

Directors' Compensation and Hours Worked Per Year

## The CEO hand-picks most directors..

- A survey by Korn/Ferry revealed that 74% of companies relied on recommendations from the CEO to come up with new directors; Only 16% used an outside search firm.
- Directors seldom hold more than token stakes in their companies. The Korn/Ferry survey found that 5% of all directors in 1992 owned less than five shares in their firms.
- Many directors are themselves CEOs of other firms.

## Directors lack the expertise to ask the necessary tough questions..

- The CEO sets the agenda, chairs the meeting and controls the information.
- The search for consensus overwhelms any attempts at confrontation.

# The Best Boards ...

THE BEST BOARDS OF DIRECTORS												
RANK	OVERALL SCORE	SURVEY SCORE	ANALYSIS SCORE	DETAILS	BOARD PERFORMANCE POLL				GOVERNANCE GUIDELINE ANALYSIS			
					SHAREHOLDER ACCOUNTABILITY	BOARD QUALITY	BOARD INDEPENDENCE	CORPORATE PERFORMANCE	SHAREHOLDER ACCOUNTABILITY	BOARD QUALITY	BOARD INDEPENDENCE

## A Contrast: Disney vs. Campbell Soup

<i>BEST PRACTICES</i>	<i>CAMPBELL SOUP</i>	<i>DISNEY</i>
Majority of outside directors	Only one insider among 15 directors	7 of 17 members are insiders
Bans insiders on nominating committee	Yes	No: CEO is chairman of panel
Bans former execs from board	Yes	No
Mandatory retirement age	70, with none over 64	None
Outside directors meet w/o CEO	Annually	Never
Appointment of 'lead director'	Yes	No
Governance committee	Yes	No
Self-evaluation of effectiveness	Every two years	None
Director pensions	None	Yes
Share-ownership requirement	3,000 shares	None

## So what next? When the cat is idle, the mice will play ....

- When managers do not fear stockholders, they will often put their interests over stockholder interests
  - Greenmail
  - Golden Parachutes
  - Poison Pills
  - Shark Repellents
  - Overpaying on takeovers

## What is Greenmail?

- Greenmail refers to the scenario where a target of a hostile takeover buys out the potential acquirer's existing stake, generally at a price much greater than the price paid by the raider, in return for the signing of a 'standstill' agreement.
- There are at least two negative consequences for existing stockholders.
  - the cash payment by the managers makes the firm poorer.
  - the payment of greenmail reduces the likelihood of a takeover, which would have raised the stock price of the firm.

# The Stock Price Consequences of Greenmail

## *Stock Price Changes for firms paying Greenmail*

<i>Target Firm</i>	<i>Greenmail Date</i>	<i>% Change in prices in following month</i>	
		<i>Stock</i>	<i>Market</i>
Phillips Petroleum	3/4/85	-22.60%	1.0%
Patrick Industries	8/5/85	-7.1%	-0.8%
Maynard Oil	10/28/85	19.6%	7.1%
Viacom International	5/22/86	-3.8%	3.6%
Enron	10/20/86	-13.3%	3.0%
CPC International	11/5/86	-0.5%	4.5%
Goodyear Tire & Rubber	11/20/86	-11.8%	-0.8%
Gillette	11/24/86	-25.7%	1.5%
United States Gypsum	12/4/86	-10.7%	-0.9%
<i>Average</i>		<i>-12.8%</i>	<i>2.2%</i>

## Golden Parachutes

- Golden parachutes refers to provisions in employment contracts, that allows for the payment of a lump-sum or cash flows over a period, if the managers covered by these contracts lose their jobs in a takeover.
- By the mid-eighties, almost 25% of the firms in the Fortune 500 had incorporated golden parachutes into top management compensation contracts.
  - Examples of excesses: The payment of \$23.5 million to six officers at Beatrice in connection with the leveraged buyout in 1985, and \$35 million to the CEO of Revlon, can be considered to be examples of these excesses.

## Poison Pills

- A security, the rights or cashflows on which are triggered by an outside event, generally a hostile takeover, is called a poison pill.
  - For instance, in a flip-over rights plan, shareholders receive rights to acquire shares in their firm at an exercise price well above the current price. In the event of a takeover, the rights 'flip over' to allow shareholders to buy the acquirers' stock at an exercise price well below the market price.
- Poison pills are generally adopted by the board of directors and do not require stockholder approval.

## Shark Repellents (Anti-takeover Amendments)

- Anti-takeover amendments have the same objective as greenmail and poison pills, i.e., dissuading hostile takeovers, but differ on one very important count. They require the assent of stockholders to be instituted.
- There are several types of anti-takeover amendments, all designed with the objective of reducing the likelihood of a hostile takeover. Among them are
  - super majority requirements
  - fair-price amendments (where the offer price has to exceed a price specified relative to earnings)
  - staggered elections to boards of directors
  - authorizations to create new classes of securities with special voting rights to dilute the acquirers' holdings.

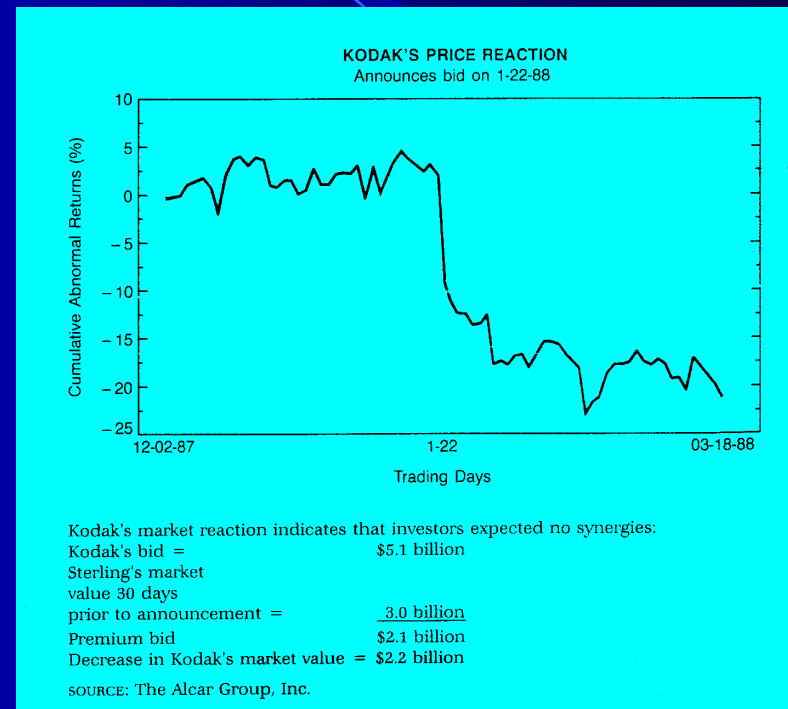

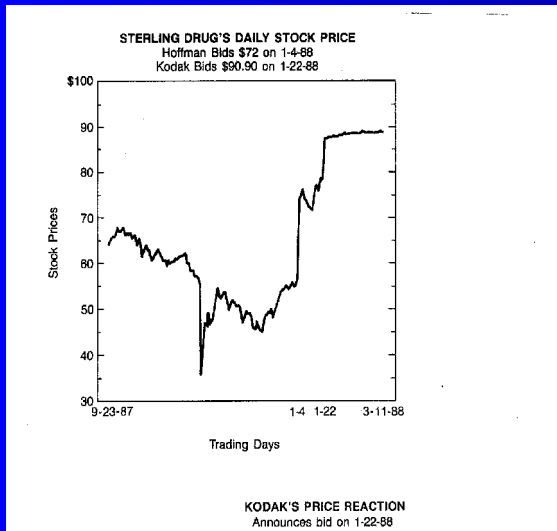

## Overpaying on takeovers

- The quickest and perhaps the most decisive way to impoverish stockholders is to overpay on a takeover.
- The stockholders in acquiring firms do not seem to share the enthusiasm of the managers in these firms. Stock prices of bidding firms decline on the takeover announcements a significant proportion of the time.
- Many mergers do not work, as evidenced by a number of measures.
  - The profitability of merged firms relative to their peer groups, does not increase significantly after mergers.
  - An even more damning indictment is that a large number of mergers are reversed within a few years, which is a clear admission that the acquisitions did not work.

# A Case Study: Kodak - Sterling Drugs

- Eastman Kodak's Great Victory

# Earnings and Revenues at Sterling Drugs

**Sterling Drug under Eastman Kodak: Where is the synergy?**

## Kodak Says Drug Unit Is Not for Sale (NYTimes, 8/93)

- Eastman Kodak officials say they have no plans to sell Kodak's Sterling Winthrop drug unit.
- Louis Mattis, Chairman of Sterling Winthrop, dismissed the rumors as “massive speculation, which flies in the face of the stated intent of Kodak that it is committed to be in the health business.”

## Sanofi to get part of Kodak Drug Unit (6/94)

- Taking a long stride on its way out of the drug business, Eastman Kodak said yesterday that the Sanofi Group, a French pharmaceutical company, had agreed to buy the prescription drug business of Sterling Winthrop, a Kodak subsidiary, for \$1.68 billion.
  - Shares of Eastman Kodak rose 75 cents yesterday, closing at \$47.50 on the New York Stock Exchange.
  - Samuel D. Isaly an analyst , said the announcement was “very good for Sanofi and very good for Kodak.”
  - “When the divestitures are complete, Kodak will be entirely focused on imaging,” said George M. C. Fisher, the company's chairman and chief executive.

## Smithkline to buy Kodak's Drug Business for \$2.9 billion

- Smithkline Beecham agreed to buy Eastman Kodak's Sterling Winthrop Inc. for \$2.9 billion.
- For Kodak, the sale almost completes a restructuring intended to refocus the company on its photography business.
- Kodak's stock price rose \$1.25 to \$50.625, the highest price since December.

## II. Stockholders' objectives vs. Bondholders' objectives

- In theory: there is no conflict of interests between stockholders and bondholders.
- In practice: Stockholders may maximize their wealth at the expense of bondholders.
  - Increasing leverage dramatically
  - Increasing dividends significantly
  - Taking riskier projects than those agreed to

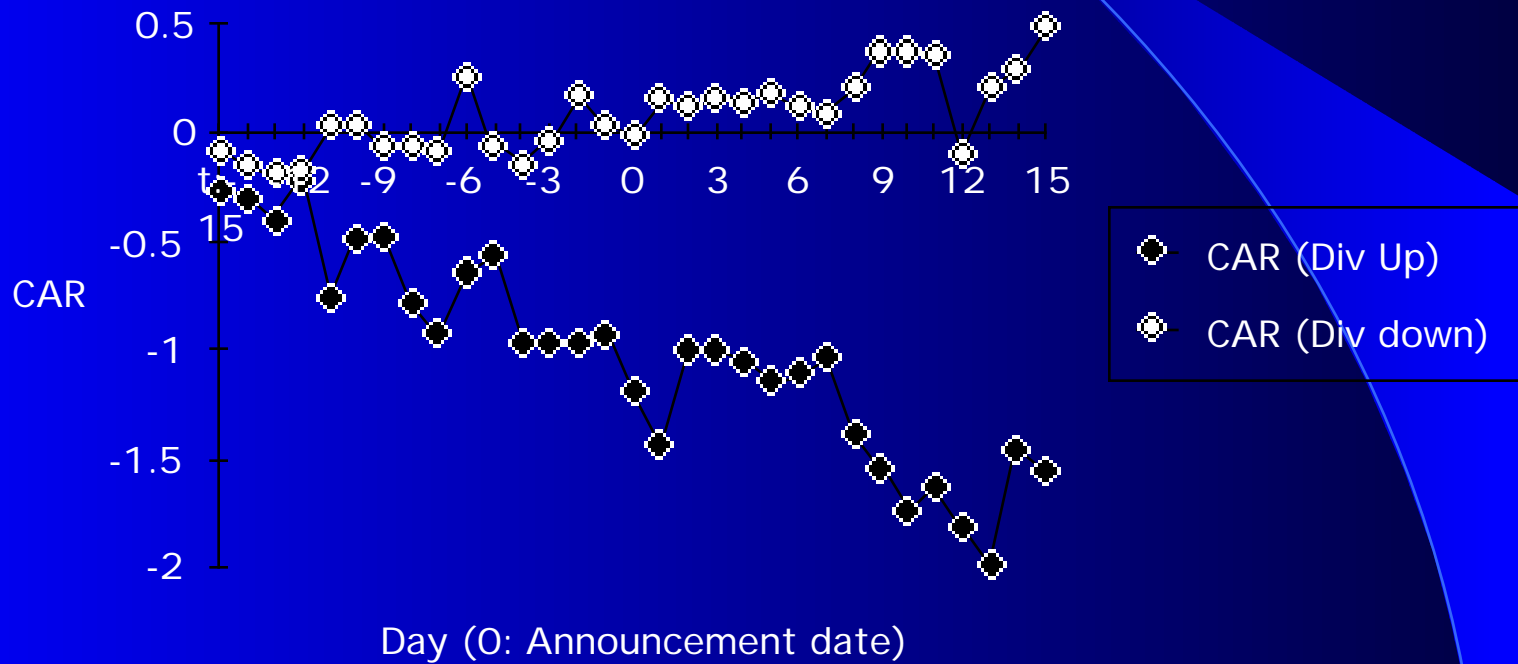

# 1. Increasing leverage dramatically and making existing bonds less valuable

RJR Nabisco's  
Bonds Sink Follow-  
ing Announcement  
of the Leveraged  
Buyout

## 2. Increasing dividends significantly

EXCESS RETURNS ON STRAIGHT BONDS AROUND DIVIDEND CHANGES

### 3. Taking projects which are significantly riskier than those the bondholder assumed that you were going to take.

- Bondholders base the interest rate they charge on the perceived risk of the firm's projects.
- If the firm takes on riskier projects, they will lose.

### III. Firms and Financial Markets

- **In theory:** Financial markets are efficient. Managers convey information honestly and truthfully to financial markets, and financial markets make reasoned judgments of 'true value'. As a consequence—
  - A company that takes on good long term projects will be rewarded.
  - Short term accounting gimmicks will not lead to increases in market value.
  - Stock price performance is a good measure of management performance.
- **In practice:** There are some holes in the 'Efficient Markets' assumption.

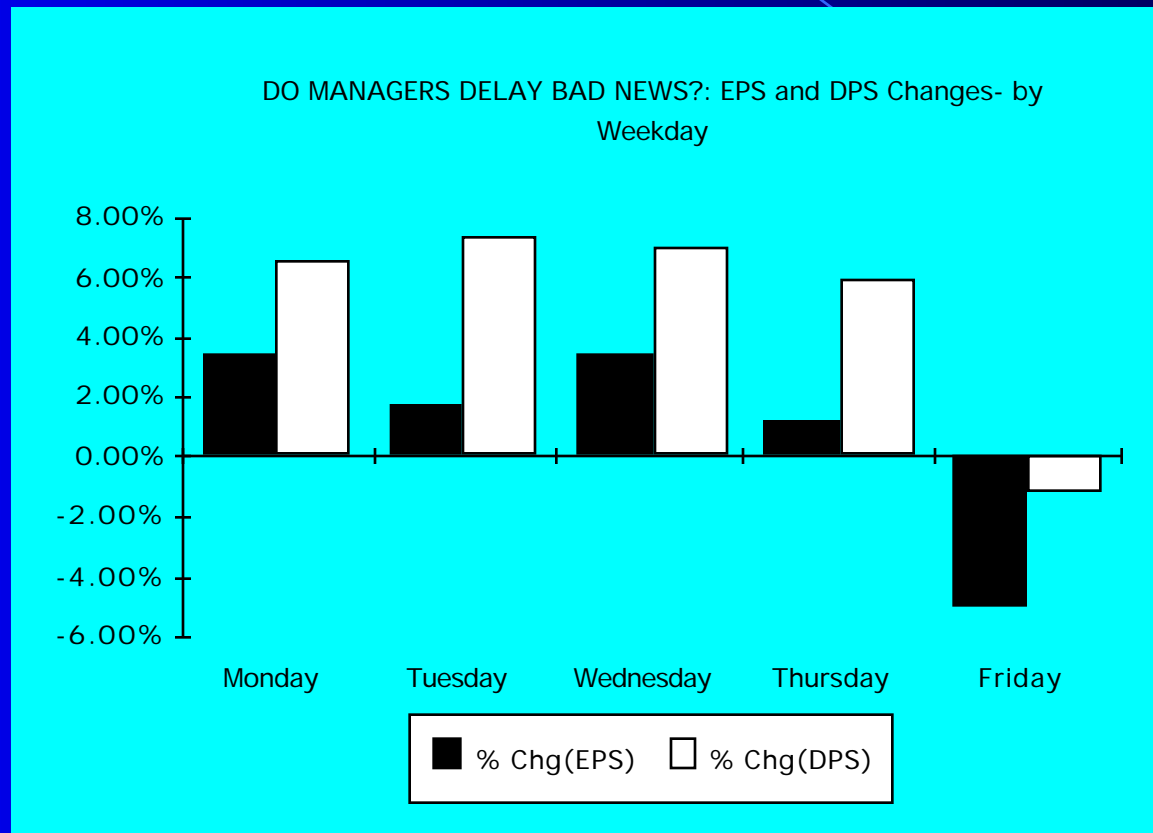

## Is Information Unbiased?

- The information revealed by companies about themselves is usually
  - honest and truthful
  - biased
  - fraudulent

# 1. Managers control the release of information to the general public

- There is evidence that
  - they suppress information, generally negative information
  - they delay the releasing of bad news
    - bad earnings reports
    - other news
  - they sometimes reveal fraudulent information

# Evidence that managers delay bad news..

## 2. Even when information is revealed to financial markets, the market value that is set by demand and supply may contain errors.

- Prices are much more volatile than justified by the underlying fundamentals
  - Eg. Did the true value of equities really decline by 20% on October 19, 1987?
- financial markets overreact to news, both good and bad
- financial markets are short-sighted, and do not consider the long-term implications of actions taken by the firm
  - Eg. the focus on next quarter's earnings
- financial markets are manipulated by insiders; Prices do not have any relationship to value.

## Are Markets Short term?

2. Focusing on market prices will lead companies towards short term decisions at the expense of long term value.

- I agree with the statement
- I do not agree with this statement

## Are Markets Short Sighted? Some evidence that they are not..

- There are hundreds of start-up and small firms, with no earnings expected in the near future, that raise money on financial markets
- If the evidence suggests anything, it is that markets do not value current earnings and cashflows enough and value future earnings and cashflows too much.
  - Low PE stocks are underpriced relative to high PE stocks
- The market response to research and development and investment expenditure is generally positive

## Market Reaction to Investment Announcements

<i>Type of Announcement</i>	<i>Abnormal Returns on</i>	
	<i>Announcement Day</i>	<i>Announcement Month</i>
Joint Venture Formations	0.399%	1.412%
R&D Expenditures	0.251%	1.456%
Product Strategies	0.440%	-0.35%
Capital Expenditures	0.290%	1.499%
All Announcements	0.355%	0.984%

## IV. Firms and Society

- **In theory:** There are no costs associated with the firm that cannot be traced to the firm and charged to it.
- **In practice:** Financial decisions can create social costs and benefits.
  - A social cost or benefit is a cost or benefit that accrues to society as a whole and NOT to the firm making the decision.
    - -environmental costs (pollution, health costs, etc..)
    - Quality of Life' costs (traffic, housing, safety, etc.)
  - Examples of social benefits include:
    - creating employment in areas with high unemployment
    - supporting development in inner cities
    - creating access to goods in areas where such access does not exist

## Social Costs and Benefits are difficult to quantify because ..

- they might not be known at the time of the decision (Example: Manville and asbestos)
- they are 'person-specific' (different decision makers weight them differently)
- they can be paralyzing if carried to extremes

## A Hypothetical Example

- Assume that you work for Disney and that you have an opportunity to open a store in an inner-city neighborhood. The store is expected to lose about \$100,000 a year, but it will create much-needed employment in the area, and may help revitalize it.
- Questions:
  - Would you open the store?
  - If yes, would you tell your stockholders? Would you let them vote on the issue?
  - If no, how would you respond to a stockholder query on why you were not living up to your social responsibilities?

## So this is what can go wrong?

## Traditional corporate financial theory breaks down when ...

- The interests/objectives of the decision makers in the firm conflict with the interests of stockholders.
- Financial markets do not operate efficiently, and stock prices do not reflect the underlying value of the firm.
- Significant social costs can be created as a by-product of stock price maximization.

## When traditional corporate financial theory breaks down, the solution is:

- To choose a different mechanism for corporate governance
- To choose a different objective:
- To maximize stock price, but reduce the potential for conflict and breakdown:
  - Making managers (decision makers) and employees into stockholders
  - By providing information honestly and promptly to financial markets

# An Alternative Corporate Governance System

- Germany and Japan developed a different mechanism for corporate governance, based upon corporate cross holdings.
  - In Germany, the banks form the core of this system.
  - In Japan, it is the keiretsus
  - Other Asian countries have modeled their system after Japan, with family companies forming the core of the new corporate families
- At their best, the most efficient firms in the group work at bringing the less efficient firms up to par. They provide a corporate welfare system that makes for a more stable corporate structure
- At their worst, the least efficient and poorly run firms in the group pull down the most efficient and best run firms down. The nature of the cross holdings makes its very difficult for outsiders (including investors in these firms) to figure out how well or badly the group is doing.

## The Porter Alternative

- Michael Porter, in his ode to the Japanese system in the 1980s, argued that the Japanese system was superior to the U.S. system because it allowed managers to be long term in their decision making, whereas the focus on stock prices made U.S. firms short term. Implicitly he is assuming that
  - ❑ Managers are smarter than stock holders
  - ❑ Market prices tend to be based on short term earnings rather than long term value
  - ❑ Managers have the long term interests of the firm in mind and are rewarded based upon the long term health and success of their companies
  - ❑ All of the above

## Choose a Different Objective Function

- Firms can always focus on a different objective function. Examples would include
  - maximizing earnings
  - maximizing revenues
  - maximizing firm size
  - maximizing market share
  - maximizing EVA
- The key thing to remember is that these are intermediate objective functions.
  - To the degree that they are correlated with the long term health and value of the company, they work well.
  - To the degree that they do not, the firm can end up with a disaster

## Maximize Stock Price, subject to ..

- The strength of the stock price maximization objective function is its internal self correction mechanism. Excesses on any of the linkages lead, if unregulated, to counter actions which reduce or eliminate these excesses
- In the context of our discussion,
  - managers taking advantage of stockholders has lead to a much more active market for corporate control.
  - stockholders taking advantage of bondholders has lead to bondholders protecting themselves at the time of the issue.
  - firms revealing incorrect or delayed information to markets has lead to markets becoming more “skeptical” and “punitive”
  - firms creating social costs has lead to more regulations, as well as investor and customer backlashes.

## The Stockholder Backlash

- Investors such as CalPERS and the Lens Funds have become much more active in monitoring companies that they invest in and demanding changes in the way in which business is done
- Individuals like Michael Price specialize in taking large positions in companies which they feel need to change their ways (Chase, Dow Jones, Readers' Digest) and push for change
- At annual meetings, stockholders have taken to expressing their displeasure with incumbent management by voting against their compensation contracts or their board of directors

## The Hostile Acquisition Threat

- The typical target firm in a hostile takeover has
  - a return on equity almost 5% lower than its peer group
  - had a stock that has significantly under performed the peer group over the previous 2 years
  - has managers who hold little or no stock in the firm
- In other words, the best defense against a hostile takeover is to run your firm well and earn good returns for your stockholders
- Conversely, when you do not allow hostile takeovers, this is the firm that you are most likely protecting (and not a well run or well managed firm)

## The Bondholders' Defense Against Stockholder Excesses

- More restrictive covenants on investment, financing and dividend policy have been incorporated into both private lending agreements and into bond issues, to prevent future “Nabiscos”.
- New types of bonds have been created to explicitly protect bondholders against sudden increases in leverage or other actions that increase lender risk substantially. Two examples of such bonds
  - Puttable Bonds, where the bondholder can put the bond back to the firm and get face value, if the firm takes actions that hurt bondholders
  - Ratings Sensitive Notes, where the interest rate on the notes adjusts to that appropriate for the rating of the firm
- More hybrid bonds (with an equity component, usually in the form of a conversion option or warrant) have been used. This allows bondholders to become equity investors, if they feel it is in their best interests to do so.

## The Financial Market Response

- While analysts are more likely still to issue buy rather than sell recommendations, the payoff to uncovering negative news about a firm is large enough that such news is eagerly sought and quickly revealed (at least to a limited group of investors)
- As information sources to the average investor proliferate, it is becoming much more difficult for firms to control when and how information gets out to markets.
- As option trading has become more common, it has become much easier to trade on bad news. In the process, it is revealed to the rest of the market (See Scholastic)
- When firms mislead markets, the punishment is not only quick but it is savage.

## The Societal Response

- If firms consistently flout societal norms and create large social costs, the governmental response (especially in a democracy) is for laws and regulations to be passed against such behavior.
  - e.g.: Laws against using underage labor in the United States
- For firms catering to a more socially conscious clientele, the failure to meet societal norms (even if it is legal) can lead to loss of business and value
  - e.g. Specialty retailers being criticized for using under age labor in other countries (where it might be legal)
- Finally, investors may choose not to invest in stocks of firms that they view as social outcasts.
  - e.g.. Tobacco firms and the growth of “socially responsible” funds (Calvert..)

# The Counter Reaction

## So what do you think?

- At this point in time, the following statement best describes where I stand in terms of the right objective function for decision making in a business
  - ❑ Maximize stock price or stockholder wealth, with no constraints
  - ❑ Maximize stock price or stockholder wealth, with constraints on being a good social citizen.
  - ❑ Maximize profits or profitability
  - ❑ Maximize market share
  - ❑ Maximize Revenues
  - ❑ Maximize social good
  - ❑ None of the above
