France	62.9	41.7
Belgium	65.6	40.2

(a) International comparisons should also take into account differences among countries in the length of tax brackets, the amount of tax relief and rates of social security contributions. The highest rate of income tax includes temporary special surcharges. All rates include (average) rates of state and local income taxes as reported in the OECD Tax Database. (b) Retained profits, includes the highest local business tax

* OECD in Figures 2003

3-4 Effective Tax Rates of Corporate Taxation(a)

(a) Figures represent the total of corporate tax, corporate housing tax and corporate business tax after adjustments for such items as company net losses. (b) Supplemental taxes (5.5% of the corporate tax amount) are included. National tax is a joint federal and state tax (50/50). Regional tax is processed as a business tax, which is a standardized tax on income from government enterprises. (c) Corporate tax rates for the state of California are used in this example. For states where city taxes apply, such as New York, the combination of federal, state and city taxes results in an average taxation rate of 45.95%. In addition to corporate income taxes, some cities and states require companies to pay such taxes as payroll taxes. (d) Includes supplemental taxes (equal to three percent of the amount of corporate taxes on enterprises. Also include occupation tax (regional tax).
